#### FIRST EDITION (1843.)

Thus publication contains all the official documents issued from the General Register Office, relating to the Registration of the Causes of Death. The greater part of it appeared in the Appendix to my Fourth Annual Report ; and I have directed it to be published separately, for distribution among the Members of the Medical Profession who have to assign the cause of death. The Statistical Nosology, with the accompanying commentary, drawn up by Mr. Farr, will, I trust, be found practically useful by them, and contribute to secure the Registration of the causes of death on a precise and uniform plan throughout the kingdom,

To repeat the words of my Report, " I hope that the registrars and informants will not fail to see the necessity of attending to the classification of fatal diseases, which has been framed for their use with much labour and after careful consideration; and that the members of the medical profession who have hitherto given their aid, will cordially assist in carrying out this national registration of the causes of death, as they alone are able to give a correct statement of the nature of the fatal diseases; and to them, more than to the members of any other profession, must be apparent the vast importance of thus collecting accurate materials for advancing the science of vital statistics."

#### SECOND EDITION (1845.)

Part I. of this Edition is a reprint of the first, and contains also the Circulars and Instructions which have been since issued to registrars and medical practitioners. Many examples, and specimens of the returns already received, are interspersed under the various heads of the Statistical Nosology; which has in other respects been but little altered. A few suggestions as to the mode of filling up the certificates will be found, p. 12.

Part II. contains a letter addressed by me to the Coroners of the Kingdom, relative to the returns of the Causes of Death by Juries; and a classification, with observations on the returns, of deaths by violence.

GEORGE GRAHAM, Registrar General.

A 2

" may have been present at the death, or in attendance during "the last illness of any Person, shall immediately after such " death, place in the hands of such other Persons as were in " attendance, of the occupier of the house in which the death "occurred, or of some inmate who may probably be required " to give information, WRITTEN STATEMENTS of the " CAUSE OF DEATH, which such Persons may show to "the Registrar, and give as their information on the subject."

 $\mathbf{5}$ 

"The recommendation in this statement has been generally adopted. But it has been represented to me by Medical men engaged in practice, who take an interest in the progress of medical science, that it would save them trouble, and tend very much to promote the accuracy and uniformity of the returns, if they were supplied with blank Forms of Certificates, to be filled up by them as occasion may require.

"In compliance with this suggestion, I have requested the Registrar of the District in which you reside to supply you with a Book, which may be used when you return the Cause of the Death of any Person attended by you.

" I shall feel obliged if you will observe the suggestions in the ' Example,' on the margin of the Certificate, and in the Statistical Nosology, relative to the mode of making the Return.

"You are probably aware that, under 6 and 7 Wm. IV., c. 86, s. 25, the Medical attendant of the deceased person, in the last illness, is bound to give information, if applied to within eight days, with respect to the several particulars required to be registered; but if the Cause of Death be entered by you in a Certificate, as accurately as is possible in the present state of medical knowledge, some person of the family may be the informant, give the registrar your Certificate, and save you frequent calls and inquiries.

" I need not dwell on the utility of accurate Returns of the Causes of Death, either in reference to public health, medical police, or medical science, which is based on extended observations; but I count on your cordial co-operation and aid in obtaining from English practitioners such Registers of the important facts in question, as may promote the public good, and may deserve the initation of the other States of Europe.

> " I have the honour to be, Sir, "Your faithful Servant,

> > " GEORGE GRAHAM, Registrar General.

" ( A Copy of the ' Statistical Nosology' will be forwarded to you

free of expense on a written application to the General Register Office, Somerset-House.<sup>4</sup>

#### PART L

THE two following circulars have been issued in the present year (1845).

# I .--- "CIRCULAR to PHYSICIANS, SURGEONS, and APOTHECARIES legally Qualified, practising Medicine in England.

"SIR,

# General Register Office, 10th July, 1815.

"THE following Address was circulated among the Members of the Medical Profession in 1837, with an Explanatory Statement, which was printed in the introduction to the Statistical Nosology, of which you have, or may procure, a copy.

"We, the undersigned, President of the Royal College of "Physicians, President of the Royal College of Surgeons, "and Master of the Worshipful Society of Apothecaries, "having authority from the several bodies whom we repre-"sent, do resolve to fulfil the intentions of the Legislature in " procuring a better Registration of the Causes of Death, being "convinced that such an improved Registration cannot fail to " lead to a more accurate Statistical Account of the prevalence " of particular Discases from time to time.

"We pledge ourselves, therefore, to give in every instance "which may fall under our care, an authentic name of the "fatal disease.

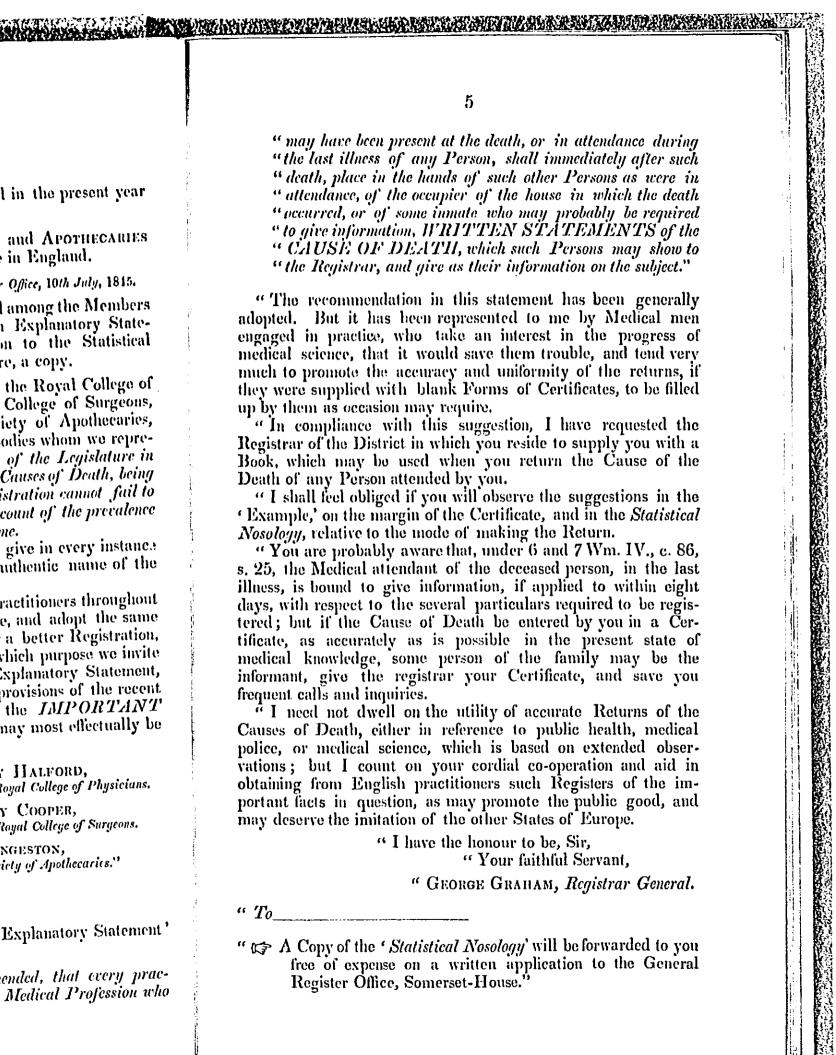

"And we entreat all authorized Practitioners throughout "the Country to follow our example, and adopt the same "practice, and so assist in establishing a better Registration, "in future, throughout England; for which purpose we invite "them to attend to the subjoined Explanatory Statement, "in which they will see set forth the provisions of the recent "statute, and the means whereby the IMPORTANT " OBJECT we have recommended may most effectually be " attained.

(Signed)	"HENRY HALFORD, "President of the Royal College of Physicians.
(Signed)	" ASTLEY COOPER, "President of the Royal College of Surgeons.
(Sigued)	"J. HINGESTON, "Muster of the Society of Apothecaries."
1.1005	

May 1st, 1837.

"The following is an Extract from the 'Explanatory Statement' referred to :---

" It is therefore, carnestly recommended, that every prac-"tising Member of any branch of the Medical Profession who

II.--" CIRCULAR.

" SIR,

General Register Office, 12th July, 1845.

" I AM aware of the difficulty which you sometimes experience in obtaining from Medical Practitioners written statements of the Cause of Death, for the purpose of being inserted in the Register Books. It is very desirable that the fatal Diseases should be accurately recorded, and I am anxious that every facility should be afforded you in obtaining correct Returns of the Cause of Death, certified in writing by the Medical attendants of the persons deceased.

" "Having this object in view, I have prepared Books for the use of Medical practitioners.

"And I will thank you to take the trouble to give one of these Books, together with a Circular Letter, (which I now transmit to you,) to every Person resident in your District and practising Medicine, who is a Member of the College of Physicians, of the British Colleges of Surgeons, or of the Apothecaries' Company, a Medical Graduate of an University, or an Apothecary legally qualified by having been in practice before 1815.

"You will have the goodness to take every opportunity of reminding the inhabitants of your District, that in the case of a Death occurring in their families, a Certificate of the Cause of Death, in the printed Form, should be procured by them from the Medical man who was in attendance during the last illness of the deceased Person, and be delivered to you by the Informant, who signs the Entry in the Register Book ; and the Entry when once commenced must be completed at the same time, in every case, no column being left blank with a view to the insertion of any particulars at a future period.

"Whenever the Death and its Cause have been certified by the Medical Attendant, you will in future mark such cases by writing "Certified" under the "Cause of Death;" and when no Certificate has been received by you from a Medical Attendant, you will write "Not Certified" under the "Cause of Death" in the Register Book, and in the copies which you transmit quarterly to this Office, as in the subjoined Examples. When the informant cannot state the "Cause of Death," write "Unknown," "Not Certified," in the column with that heading; and when you ascertain that no Medical Man was in attendance during the last illness, the fact of such nonattendance should be recorded, as in the third Example.

" If any qualified Medical Practitioner should refuse to fill up the Certificate of the Cause of Death, when requested to do so, I will thank you to let me know.

" I have the honour to be Sir,

" Your faithful Servant, " George Grанам, *Registrar-General*.

STATISTICS STATISTICS

VI .--- MEDICAL INFORMANTS.

The following is the explanatory statement referred to in the Circular of July 10th, 1815.

"The recent Act for registering Births, Deaths and Marriages in England, presents an opportunity for obtaining that great desideratum in medical statistics, a more exact statement of the causes of death, in the case of every registered death throughout the whole of England and Wales, after the month of June next ensuing.

"The Register-Books in which all deaths are to be registered after the last day of June, 1837, contain columns wherein may be inserted the cause of death, in justaposition with those other important illustrative circumstances, the sce, the age, and the profession or calling of the deceased person. Each Register-Book will also be assigned to a particular District of small extent, and will thus show in what part of the kingdom each death has occurred. If, therefore, the cause of death be correctly inserted, there will exist thenceforward public documents, from whence may be derived a more accurate knowledge, not only of the comparative prevalence of various mortal diseases, as regards the whole of England and Wales, but also of the localities in which they respectively prevail, and the sex, age, and condition of life which each principally affects.

" For the attainment of this object, it is necessary to ensure, as far as it is possible, the correct insertion of the ' cause of death.' It is obvious that on this subject the requisite information can seldom be given to the Registrar, except by the medical attendant of the deceased person ; and that even if the Registrar be a medical practitioner (which in many instances will be the case), yet will he often be unable to ascertain the truth in this respect, if he is to depend solely on the reports of persons ignorant of medicine and of the names and nature of diseases; and it cannot be expected that from his own knowledge he will be able so far to correct their errors as to ensure a statement worthy of credit. The requisite information must therefore be supplied either directly or indirectly by the medical attendant of the deceased person; that is to say, if such medical attendant is not applied to by the Registrar, he must afford the requisite information to those other persons to whom the Registrar must apply.

"The persons who, according to the Act for Registering Births, Deaths, and Marriages in England, must give information to the Registrar on being requested so to do, are 'some person present at the death, or in attendance during the last illness;' or ' in case of the death, illness, inability, or default of all such persons, the occupier of the house or tenement; or, if the occupier be the person who shall have died, some inmate of the house or tenement in which such death shall have happened.' It is also provided that, 'for the purposes of this Act, the master or keeper of every gaol, prison, or house of correction, or work-house, hospital, or lunatic asylum, or public or charitable institution, shall be deemed the occupier thereof.

a mala source and the second of the second second

" It is therefore carnestly recommended that every practising member of any branch of the medical profession who may have been present at the death, or in attendance during the last illness of any person, shall, immediately after such death, place in the hands of such other persons as were in attendance, of the occupier of the house in which the death occurred, or of some inmate who may probably be required to give information, a written statement of the cause of death, which such persons may show to the Registrar, and give as their information on that subject.

" It is desirable that such statement should be very short, the column in the Register-Book in which it is to be inserted being not more than sufficient for the insertion of about 10 words of moderate length.

#### VII.-Remarks from Appendix to First and to Fourth Report, on the Returns of the Causes of Death, before the Medical Certificate Books were issued.

"The returns procured in the first year were, on the whole, tolerably satisfactory ; but, as might have been expected, some of the entries were incorrect; the information in many instances had not been furnished directly by medical men, and had been furnished in ill-defined words, such as decline, fit, inflammation, visceral disease, cold, long illness. Local terms were employed, which appear to denote different diseases in different parts of the country. In many cases where inquests were held, no attempt had been made to inquire into the direct cause of death.

It appeared therefore necessary to suggest, as far as was practicable, the use of a uniform intelligible nomenclature. The following remarks were made in the Appendix to the First Report; and a classification was adopted which has been followed in the subsequent Reports :---

" The advantages of a uniform statistical nomenclature, however imperfect, are so obvious, that it is surprising no attention has been paid to its enforcement in bills of mortality. Each disease has in many instances been denoted by three or four terms, and each term has been applied to as many different diseases ; vague, inconvenient names have been employed, or complications have been registered, instead of primary diseases. The nomenclature is of as much importance in this department of inquiry as weights and measures in the physical sciences, and should be settled without delay.

" In order to render the register as correct as possible, it is desirable that the cause of death should be directly certified in every instance by the medical attendant, who might either leave the certificate with the informant, or give it, upon application, to the Registrar. When the medical attendant is the informant, he will of course sign the register, as directed by the Act.

" The duration of the fatal disease should be stated, when known, in hours, days, or years; which would supersede the words 'sudden,'

+ For the names recommended, see NosoLogy.

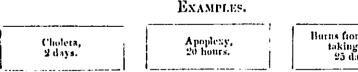

'acute,' ' chronic,' &c., and in the end furnish many highly important results.

" The tabular arrangement exhibits the greater number of the causes of death, under names which will be found convenient in practice, and sufficiently precise for statistical purposes. The common English name has always been adopted, in conformity with the opinion expressed above, except in a few obvious instances; but where no one English name existed, and where the disease is popularly expressed by periphrasis, the common medical term has been adopted. Pneumonia is used, for instance, and not inflammation of the lungs. The Latin or English synonyme will render the tables intelligible, on the one hand, to foreigners, and on the other, to the general reader. If the causes of death were uniformly registered under the same names, and each cause of death designated by one word, it would increase the accuracy of the Abstract, and diminish the labour of framing it very considerably."\*

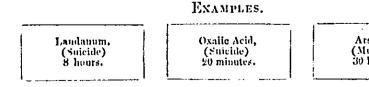

" Further experience confirmed these remarks ; and it was deemed desirable to revise the nomenclature, and to make such alterations and additions as the rapid progress of medical science required.

"The statistical nosology contains all the more common diseases. "The notes, it is believed, will clear up some of the obscurities which present themselves in the registration of complicated causes of death, and will tend to preserve uniformity, and to prevent omissions. It is impossible to give directions to meet every case ; but by examining the examples, and reflecting on the nature and the use of the information required, the informants can seldom be in much difficulty. It must be borne in mind that the column for the entry is little more than ' sufficient for the insertion of ten words;' for this reason, and to facilitate the labour of making the abstracts, the cause of death should be always stated in as few words as possible. When three or four causes have concurred in producing death, it will generally be sufficient to write them under each other without connecting verbs or particles.

" The pURATION OF THE ILLNESS, or the time clapsing between the manifestation of unequivocal symptoms of the fatal disease and the death, should be registered thus :---

"Where poison has been the cause of death, the time which clapses between its administration and death should be carefully registered :---+

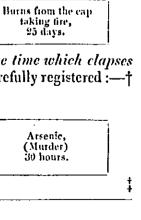

\* Appendix to the First Report.

† The quantity of the poison taken should also be stated, if it can possibly be ascertained.

† Appendix to the Fourth Report, p. 146. 8vo.

11

## VIII.-Suggestions to Medical Practitioners respecting the mode of returning the Causes of Death.

(1.) State the causes of death in terms as precise and brief as possible ; and use, if convenient, the names recommended in the Nosology, for the sake of uniformity. The column of the Register Book for the entry will contain about ten words.

(2.) Write the causes of death in the order of their appearance, and not in the presumed order of their importance.

(3.) The duration of primary and secondary diseases in these returns will always be considered to imply the time intervening between the first appearance of well-marked characteristic symptoms-and death. Smallpox, scarlatina, crysipelas, typhus, and all febrile and inflammatory diseases should, however, be dated from the rigors and first symptoms, not from the later appearance of the eruptions, &c. The time in the certificate, opposite the primary disease, will therefore include the whole term of illness. Thus : " Scarlatina maligna, 21 days ; purulent infiltration, 7 days, (r.M.);" implies that the earliest symptoms of scarlatina occurred 21 days before death; and that 7 days before death puralent infiltration was observed. So, "Hooping cough, 16 weeks; paralysis of motor nerves, right side, 4 weeks ; pneumonia, 3 weeks," is understood to mean that symptoms of the cough appeared 16 weeks, of the paralysis, 4 weeks, of the pneumonia 3 weeks before death. Confusion has been produced in some returns by inattention to this point.

No attempt should be made to guess the duration of latent stages of diseases; but it will generally be possible to fix on a point of time near the access, when the patient had no symptoms of disease, and another, when the symptoms were unequivocal : if the disease be dated from the middle point of the intervening time, the results will be sufficiently accurate. 'The duration should be stated in minutes or hours, when the disease is fatal in less than 48 hours; in days, in diseases of less than 50 days' duration ; in weeks or years, for diseases of still longer duration. Month is an equivocal term, as a measure of time; when used in the returns, it will be deemed the twelfth part of a year. }

(4.) State, in fatal cases of small-pox, measles, scarlatina, typhus, rheumatism, mania, delirium tremens, apoplexy, and the like diseases, whether it be the second, third, &c. attack, whenever the patient has sustained more attacks than one. In ague, epilepsy, convulsive diseases, angina pectoris, syncope, and other maladies which occur in fits or paroxysms, date the illness from the first fit; and add the duration of the last fatal fit; thus: cpilepsy, 5 years; last fit, 6 hours.

(5.) Surgeons, in all cases of operations, should return (a) the primary disease or injury—(b) the operation—(c) the secondary diseases -such as erysipelas, purulent deposits, &c.; and should state also the time from commencement of the primary disease-the time from the operation—and the time from the appearance of secondary disease, reckoning in each instance to the death.

13 (6.) It sometimes happens that the nature of the fatal disease cannot The examples from the certificates received are not all given as spe-Note .-- In order to be in a position to return the causes of death accu-Engaged in the practice of a laborious profession, medical men lates of Important cts in the Case; and he resulting Recovery or Death. ient first seen March9; e cruption of measles en visible; appeared the 8th; cough, rastloured spata, crepita-u, 12th; left lung condated, 14th; last seen, trel: 19th; died March th. P. mortem: left g hepatized; pleura erent. • The Number will refer to the prescription book for treatment. The importance of instituting post mortem examinations very genecians and surgcons of the information derivable from this source. In ordinary cases no attempt is made to preserve the body from corruption, when life is extinct; and the examination by medical men of the state of the internal structure, instead of accelerating decay, may be made, by embalming, a means of preserving the frame from decomposition ; if it were not rather desirable and more in consonance with the best feelings ----that the elements---water, air, carbon, and the salts---of which the earthly tenement is composed, should be restored as soon as possible to their free state-to be again re-organised and re-animated.

be discovered-even after a post mortem examination of all the organsand still more frequently in the absence of an examination. In such cases it is better to name one or more of the leading symptoms and peculiar appearances, than to assign a specific cause on imperfect, inadequate evidence. P. M. should be added when the causes of death have been verified by a post mortem inspection. cimens of perfect returns of the causes of death, but as illustrations of the manner in which the facts are viewed and stated in the present state of medical knowledge. rately, medical practitioners are carnestly recommended to keep brief memoranda of all the cases which they attend, in the simplest form, such as is given below. The private register of the medical practitioner would at the end of a few years be of incalculable interest to him: he might refer back to it for important information, transmit it to his sons or successors in practice, analyse the results of his experience; and, in conjunction with his brethren all over the country, would ultimately accumulate a vast series of materials, which could not fail to advance medical science. should not attempt too much at first; all cases should be noticed; but those facts should be chiefly recorded which are of an unequivocal nature, and that admit of precise statement, and comparison in respect to number, time, weight, and measure. rally, cannot be too strongly urged. It is impossible to calculate how much suffering and untimely death are occasioned by depriving physi-

They atributors to medical so ugs will be found the p the medical practitions not been thought neces s have not been publish	are referred to either because they have have extended the domain of our know- are of course but a small number of the dence who have adorned the present age; revailing medical opinions, which will for ers of this country in returning the causes sary to refer to the particular works; but hed, articles by the writers on the particular <i>Medicine</i> , the <i>Cyclopædias of Medicine</i> ,	Anatomy, and Surgery, the Transactions of Medical Societies, or in the Medical Journals. The various nosologies, Cooper and Copland's Dictionaries, the works on the Practice of Physic by Mason Good, Craigie, Bright, and Addison, and the excellent Lectures of Dr. Watson might also be named. As the object has been to refer to writings easily accessible to every medical practitioner who may have occasion to return the causes of death, the names of few foreign or ancient writers have been cited. This is mentioned that the omission might not be misinterpreted. The writers named at the beginning of each class have generally treated of the diseases of that class.	

Names to be used, (iii)

5 DIPHTHERIA: Diphtheritis; diphtherite. This specific inflammation, with the exudation of congulable lymph, is frequently called Angina membranacea, und ulcerated sore throat. There are neither true eschars nor ulcers. (Bretonneau.)

Ex.-Diphtheria, 21 days, (p. m.) Diphtheria, 10 days, (p.m.)

Cynanche parotidica ; parotitis ; 6 Mumps. parotia.

7 Hooping-Couch.

Pertussis; chin-cough.

Ex.-Hooping-cough, 21 days; remitting fever, 10 days.

Hooping-cough, 21 days ; preumonia, 7 days.

Hooping-cough, 4 months ; paralysis of (motor nerves) right side, 1 month; pneumonia, 3 weeks.

Hooping-cough, struma.

Hooping-cough and teething, 6 weeks ; pneumonia, 5 weeks ; chicken-por, 10 days; noma, 5 days.

#### 8 CROUP.

Cynanche trachealis.

Whenever croup is a secondary disease, or is complicated with diphtheria (5)-it should be su registered.

Ex.- Croup, 48 hours. Croup, 7 days. Croup, 54 hours.

9 THAUSH.

#### Aphtha; lily.

Aphtha, with vesicles, ulcers of the follicles, or a concrete mucous secretion, is included in this entry. The latter form is called muguet in France, and lily, the corresponding English name, in some parts of this country. Aphtha occurs in the latter stages of chronic diseases, to which and to "Thrush," the death must be referred,

Ex.—Aphtha, 7 days.

10 DIARRHEA.

#### Looseness; purging; bowel complaint; lientery. (Latham.)

When the diarrhea occurs in the course of typhus, of consumption, or of other diseases, it should be so registered.

Ex.—Diarrhaa, 5 days; convulsions, 8 hours. Diarrhaa, 30 days; senile gangrene (haunch), 16 days.

11 DYSENTERY.

Dysenteria; flux; bloody flux; (Johnson, Martin.)

Ex.—Dysentery, 14 days.

Dysentery, 6 weeks (ulc. of colon and rectum); gangrene of nutes, 4 days.

Dysentery, (endemic,) 24 days; convulsions, (2nd fit,) 24 hours (p. m.)

12 CHOLERA.

Cholera Asiatica; epidemic cholera; cholera biliosa; cholera infantum; cholera morbus; cholerine.

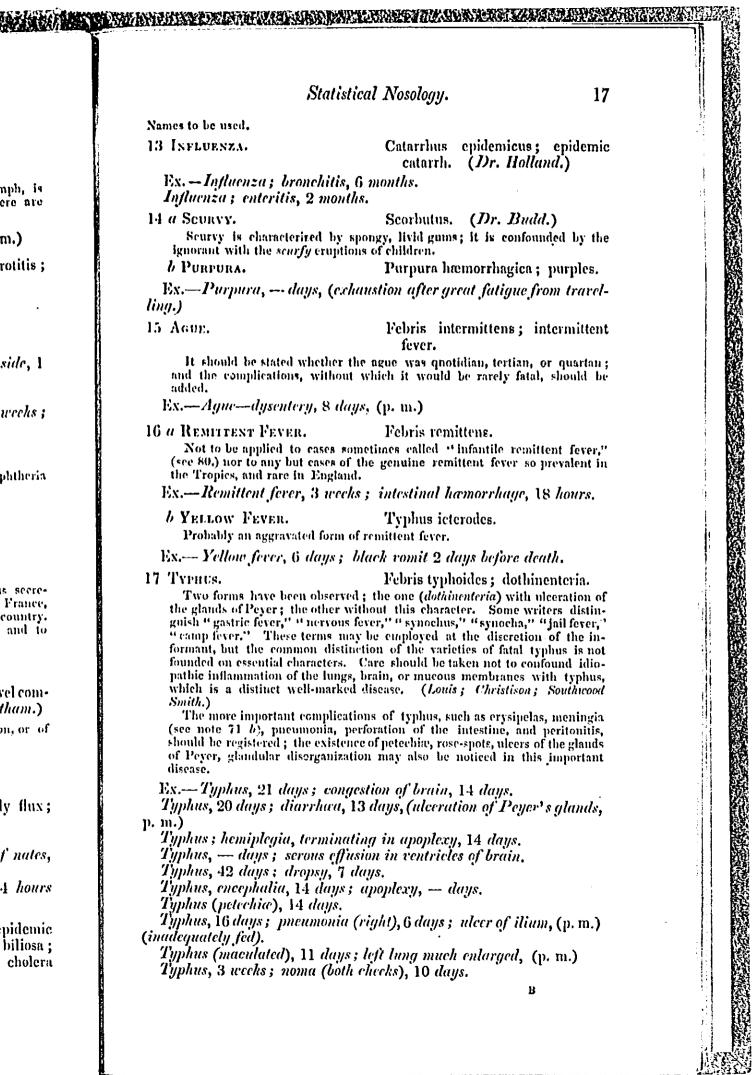

Ex.-Cholera-low fever, 15 days.

<ul> <li>Names to be used.</li> <li>13 INFLUENZA. Catarrhus epide catarrh. (D)</li> <li>Ex Influenza; bronchitis, 6 months. Influenza; enteritis, 2 months.</li> <li>14 a SCURVY. Scorbutus. ## Statistical Nosology,

3.3		
	Charles I Manalauna	Statistical March
	18 Statistical Nosology.	Statistical Nosology. 19
	Names to be used.	Names to be used.
	18 PUERPERAL FEVER or METRIA. Uterine phlebitis; puerperal peri- tonitis; childhed fever, 104. (Dr. R. Lee; Dr. Ferguson.)	C ERVTHEMA. This rash or superficial blush of the skin is sometimes confounded with crysipelas. It is frequently symptomatic of disorders of the digestive organs.
:	Metria has been derived from $\mu_{\pi\pi\gamma\pi}$ , the womb-(root $\mu_{\pi\pi\pi\rho}$ , mother).	23 a NECUSIA, A disease produced by puncture or
:	19 PESTIS. Plague Was prevalent in England down to the close of the 17th century. 68,056 deaths were reported in the London bills of mortality, x.p. 1665. Only two cases were reported in 1679. It then merged in "spotted fever," or "ague and fever," and has now disappeared. May not isolated cases, however, occur sporadically, and be confounded with typhus ?	infection in dissection; inocula- tion with the matter of a dead body; cellulitis venenata. (Dr. Duncan; Mr. Stafford; Dr. Williams.) Necusia has been derived from view, the dead body.
	20 RHEUMATIC FEVER. Rheumatismus ; rheumatism	b MALIGNANT PUSTULL. Pustule maligne.
	(acute). Rheumatism is rarely fatal except when it is acute and attacks the mem- branes of the heart or brain; such cases should be registered "Rheumatic branes of the heart or brain; such cases should be registered "Rheumatic	Occurs sometimes in butchers, or others who have handled the carcases of infected animals. c HOSFITAL GANGRENE. See 39. (Butter.)
	days," &c. See "Chronic rheumatism," 100, (17, 1174), 27, 200, (17, 1174)	d TETANUS. See 53.
	Ex.—Rheumatic fever, 12 days ; meningitis, 8 hours. Rheumatic fever, 2 months ; tracheitis, 4 days.	e Mildew Mortification. Gangræna ustilaginea ; ergotism.
	Rheumatic fever, 2 montas, tracherts, 4 days. Rheumatic fever ; discase of heart, 2 years. Rheumatic fever, 10 days ; jaundice, 2 days.	24 GLANDERS. Equinia ; farcinoma. It may be stated how the disease was contracted. ( <i>Elliotson</i> ; Rayer.)
	21 a Symillis (Primary). Lues venerca; venereal disease;	25 Hydrophoria. Lyssa; rabies.
	chancre. The particular form of the primary and secondary disease, as well as com- plications, should be specified. Phagedæna, rupia, or the immediate cause of death, should be especially noted.	The time which elapses between the bite of the rabid animal and the first symptoms of disease,—between the symptoms and the death of the patient, should be mentioned. If spontaneous cases ever occur, and prove fatal, they should be carefully distinguished. Ex.—Hydrophobia, 4 days, (bit by a rabid dog 5 months before.)
	b Symmus (Secondary) (Hunter ; Mr. Parker, M. Ricord, Mr. Acton.)	26 Porrigo. Tinea; favus; scald-head; ringworm of the scalp, (Plumbe, Phillips, Gruby.)
	Es.—Syphilis, 3 months; convulsions. Syphilis, consumption, 12 months. Syphilis, 21 months; phthisis, 8 months, (tubercles in lungs, p. m.) Syphilitic alcers on scalp, some months. Syphilis; alceration of cartilage of larynτ, — weeks.	27 SCABIES. Itch, psora. (Raspail, E. Wilson.) 26, 27, are not fatal diseases, but belong to this class. The secondary diseases or complications should be always stated.
	c Gonorrhea.	(A) CROBADICI MERACUS OF UNCURDINANT OF
	22 a ERYSIPELAS. Ignis sacer; rose; St. Anthony's fire.	(2)SPORADIC DISEASES OF UNCERTAIN OR VARIABLE SEAT.
	Ex.—Erysipelas of the head, 12 days, (idiopathic.) Erysipelas, 23 days; bronchitis, 11 hours. Erysipelas in , 14 days; suppuration in knec-joints, with absorption of matter, 4 days.	This class consists of discases of variable seat, or diseases in which the nature of the morbid product or action is, as in cancer, of more im- portance than the part affected. (Meckel, Andral, Carswell, Craveilher, Craigie.)
	Erysipelas of head and face, 3 weeks; arachnitis and effusion. It should have been stated in the last and the preceding cases, whether the erysipelas was traumatic; and if so, what was the nature of the wound.	28 Пемокинаде. Bleeding; rupture or bursting of a blood vessel; hæmorrhagia.
		If the bleeding be from wounded arteries or veins, it should be stated, It is commonly supposed that the discharge of blood from the lungs and other
<b>,</b> i ;	b TRAUMATIC ERYSIPELAS. Erysipelas is either simple, phlegmonous, or ordematous. It occurs occa- sionally at the close or in the course of other maladies, to which and to erysi- pelas, the death should in such cases be referred. Erysipelas frequently fol- lows wounds and surgical operations. The operation, as well as the disease for which it was performed, should be registered thus:-"Scrofulous disease of ankle joint,-amputation of the leg,-erysipelas," See 145.	This commonly supposed that the discharge of blood from the fungs and other internal organs is, like external hæmorrhage, from an opened blood-vessel. This is an error. Hæmorrhage from the rupture of a blood-vessel is rare. The blood is exhaled from the capillary system of internal organs. Death should be ascribed to rupture of a blood-vessel only when the rupture has been detected; and it will then be more convenient to use "laceration or bursting of an artery or vein," as the case may be, naming the particular vessel.
	-	в 2
:		

Names to be used.

When the hæmorrhage arises from the bursting of an aneurismal sac, or of varicose veins, the entry should be "Aneurism burst."-4 Varicose vein burst."

Fatal hæmorrhage occurs in fevers, in scurvy, and in purpura, of which, and some specific alteration in the blood, it is then the result. The cases should be registered " Scurvy with hamorrhage from the gums," &c. &c.

Hæmorrhage is the frequent result of morbid alterations or deposits in the tissues, as in consumption and cancer. It is here a secondary malady.

Hæmorrhage is also produced by obstructions of the venous circulation, as in some diseases of the heart and liver.

These remarks apply generally to epistaxis, hemoptysis, hematemesis, melana, hæmorrhoids, hæmaturia (which are named distinct diseases), as well as to other hamorrhages. When hamorrhage takes place in the head, it causes apoplexy and paralysis. (Dr. Watson.)

Bleeding from the nose. a Epistaxis.

Ex.-Epistaxis, 2 months (hamorrhagic spots in brain and heart.)

Discharge of blood (generally red) 6 HEMOPTYSIS. from the lungs by coughing; spitting of blood.

Ex.-Hamorrhage from lungs, 7 days.

Hamoptysis, 4 days, (tubercles in lungs, p. m.) Measles, 14 days; ruptured vessel, 3 minutes. (What vessel, was not stated.)

C HEMATEMESIS.

Vomiting of blood (generally dark).

Ex.-Hæmatemesis, 2 days.

Hæmatemesis ; scirrhus of pylorus, 20 years. Hæmatemesis 15 years ; last attach, 3 days.

d Melæna.

Discharge of black blood by stool from the intestines.

Ex.—Hæmorrhage from intestines after a violent fit of coughing, 10 hours, (a male, age 49.)

e HÆMORRHOIS. f Hæmaturia.

Bleeding piles. Discharge of blood from the urethra (frequently from stone in the kidneys); bloody urine.

Ex.-Hæmaturia, 5 years ; liver disease, 6 months.

Uterine hæmorrhage (not in nor after 9 MENORRHAGIA. delivery)

Ex.-Menorrhagia, 5 months; jaundice, 4 months. Cancer of uterus; menorrhagia, 1 year.

In childbirth or abortion, see 104. h FLOODING.

Ex.-Hæmorrhage in 8th month of pregnancy, 19 days.

Bloodlessness; sanguinis defectus. 29 a ANEMIA. Green sickness. **b** Chlorosis.

30 DROPSY.

Hydrops; anasarca; cedema.

For the acute dropsy following scarlatina, see "Scarlatina." Whenever there is "dropsy," it should be registered, and referred to the heart, lung, or kidney diseases, if they be positively proved to exist either by the symptoms or post mortem examination. Where there is a doubt about the existence of the organic disease, "dropsy" alone should be used. Dropsy occurs in

Statistical Nosology.

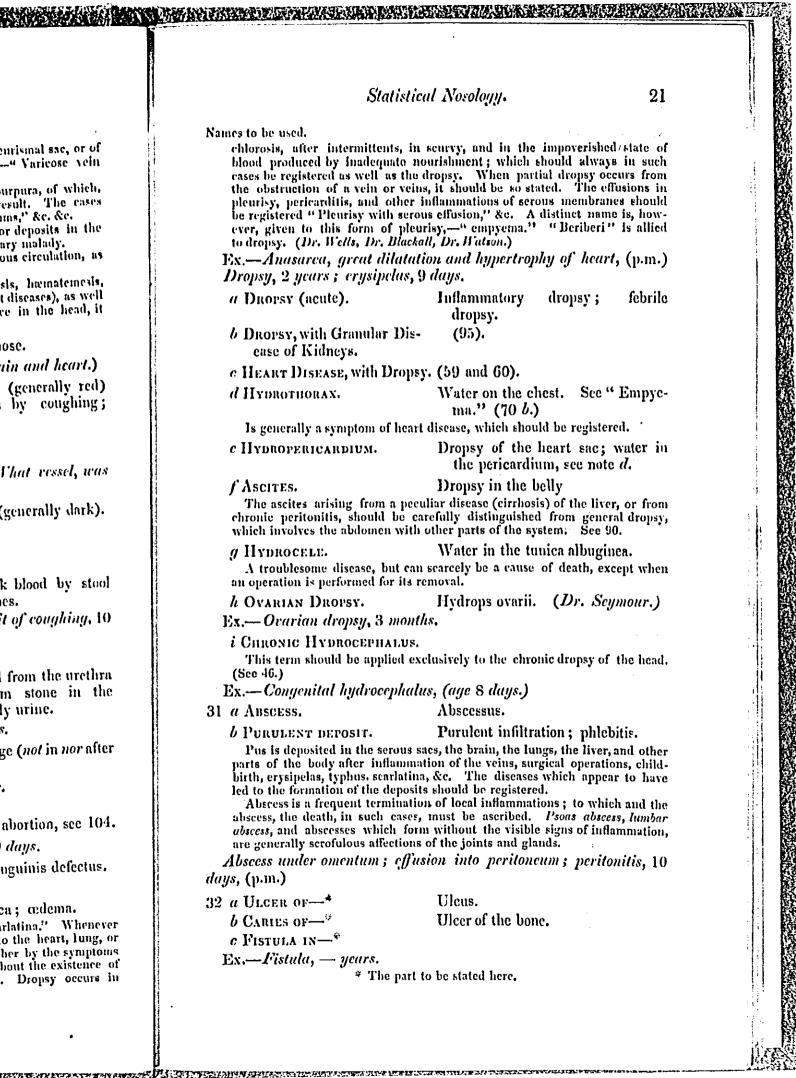

Names to be used.

chlorosis, after intermittents, in scurvy, and in the impoverished/state of blood produced by inadequate nourishment; which should always in such cases be registered as well as the dropsy. When partial dropsy occurs from the obstruction of a vein or veins, it should be so stated. The effusions in pleurisy, pericarditis, and other inflammations of serous membranes should be registered "Pleurisy with serous effusion," &c. A distinct name is, how-ever, given to this form of pleurisy,—" empyema." "Beriberi" is allied to dropsy. (Dr. Wells, Dr. Blackall, Dr. Watson.)

Ex.—Anasarca, areat dilatation and hypertrophy of heart, (p.m.) Dropsy, 2 years ; erysipelas, 9 days.

a Drorsy (acute).	Inflammatory dro dropsy.

33 (Tuberculous Discase).

a SCROFULA,\* or STRUMA Evil; king's evil; cretinism. (Alison, Carswell, Lugol, Baudelocque, B. Phillips.) \* The parts affected with the scrofulous disease should be added; and Struma or " Scrofula" alone should scarcely ever be used.

b SCROFULOUS, or STRUMOUS Inflammation of the glands; ade-INFLAMMATION OF- nitis; disease of the joints.

Ex.--Scrofulous inflammation of hip-joint; effusion of pus in peritoneum.

c Scropulous, or Strumous

Abscess of-

Ex.-Scrofulous abscess, 2 years ; dysentery, 14 days.

d Scrofulous, or Strumous

ULCER OF-

e PEOAS ABSCESS. Abscessus proanus; abscessus lumbalis.

Ex.—Caries of spine, 2 years ; lumbar abscess, 6 months ; diarrhea, 2 months.

Scrofulous discase of hip-joint, 5 years.

Scrofula ; psoas abscess, 12 months.

Scrofulous discase of spine, 6 years ; dropsy, 10 weeks. Psous abscess, 2 years.

f TABES MESENTERICA. Mesenteric disease; marasmus.

Ex.— Tabes mesenterica, 3 months; (without breast milk last month.)

Mesenteric discase, 2 months ; diarrhaa, 2 weeks.

g PRTHISIS. See No. 73. Phthisis pulmonalis; consumption; tubercular phthisis.

In phthisis the lungs are the most important seat of the deposit and the disease; which are not, however, confined to those organs, but also affect the mesenteric glands, the liver, the kidneys, the mucous and the scrous membranes. Perforation of the intestine, or of the pleura, is sometimes the immediate cause of death in phthisis. Such cases should be registered "Phthisis; perforation of the ilium," "Phthisis, pneumothorax," &c. All the important secondary diseases in phthisis should be registered in a similar manner. (Bayle, Lacance, Louis, Sir James Clark.)

Ex.—Scrofulous discuse of ankle joint, 18 months; phthisis, 4 months.

Phthisis and tubercles in mesentery, 2 years ; peritonitis, 12 hours. Phthisis, 2 years : hæmoptysis.

Phthisis, 25 years; peritonitis, 18 hours.

Phthisis, large cavities in left lung especially ; slight hamoptysis, - months.

h RICKETS.

Rachitis.

Ex.—Rickets, 3½ years; congestion of brain, 10 hours.

i BRONCHOCELE.

Wen; goitre; Derbyshire neck.

Rickets and bronchoccle have generally been referred to scrofula, but they are not perhaps essentially tuberculous diseases, though the persons in whom they occur are of a scrofulous habit,

Statistical Nosology. Names to be used. Ex.--Fibrous tumour of uterus and ovary. Tumour of brain suppurated ; epilepsy, - days. d POLYFUS OF--Ex.-Polypus uteri, 7 months.

38 a Atrophy of-

24

Atrophia.

Decline ; wasting ; marasmus. **b** Emaciation. The part affected to be added after atrophy, which should only be applied to local defects of nutrition. When the emaciation is general, it is usually the result of tuberculous or of some chronic disease. It is then a mere symptom. The same remark will apply to general debility. (12.)

Ex.-Marasmus, 10 weeks; emaciation and debility (age 9 months.) Gangræna; sphacelus; sloughing. 39 MORTIFICATION. Softening. a RAMOLISSEMENT OF--Gangræna senilis. b DRY GANGRENE OF-(23). Gangræna nosocomialis. C HOSPITAL GANGRENE OF-Water-canker; gangraena oris; d Nona. cancrum oris. Gaugrene from cold (see 135). c FROST-BITTEN INf TRAUMATIC GANGRENE OF- Gangrene from injuries (see Violent deaths, 144, 145). ese ist q BEDSORE. Ex .-- Gangrene of right lung, 3 weeks; pneumonia (left lung), a few hours, (p. m.) Gastro-enteritis, 21 days; gangrene of fingers of left hand, 24 days. Dry gangrene of toes, 10 days. Mortification of integuments of back, - days. It was not stated in this case, as it should have been, how the mortification was caused. Noma (mouth), - days, (a child of 2 years.) Noma (umbilicus), - days. Dysentery, 9 months ; noma, 14 days, (p. m.) Noma, extending through both cheeks, - days. Noma through upper lip, - days. Noma through lower lip, - days. Under "Mortification" should be registered all the remaining varieties. (Carnell.) If mortification occur after hernia, an operation, a blister, &c., it should be registered "Hernia, mortification of the intestine," &c. Spontaneous combustion. 40 CATACAUSIS. The circumstances in which it appears to have happened should be briefly stated. Senectus; natural decay; natural 41 OLD AGE.

There is reason to believe that many of the diseases of the aged are not detected; and that the terms, "Old Age," and "Natural Decay," are often incorrectly assigned as causes of death. Pneumonia is a very frequent cause of death in the aged; and can be detected by the physical signs, though its other symptoms may be latent.

debility from age; climacteric

disease. (Sir Henry Halford.)

should be written, if known, under "Premature Birth."

Premature birth in 6th month. (Geoffroy St. Hilairc.) 43 MALFORMATION. Blue disease. " CYANOSIS. **b** Spina Bifida. Imperforate anus. c Anus Imperforatus, &c. Ex.-Spina bifida, 8 weeks; hydrocephalus, 5 weeks. Nonclosure of foramen ovale; also a communication between the ventricles, (age 4 years,) (p. m.) Congenital constriction of larynx, (age 3 months,) (p. m.) Hamorrhage from different parts of the body; the skin imperfect from birth, (a male, age 6 weeks.) "Imperfectly developed" is an ambiguous expression, and should be avoided. Vermes; verminatio. 44 Worms. Acephalocystis endogena; A. mula HYDATIDS. tifida ; echinococcus hominis. Trenia solium. b TAPE WORM. c STRONGILUS GIGAS. Round worm. d Ascants Lumbricoides. Thread worm. c Ascaris Vermicularis. Other parasitic animals, and indeed those above named, though frequent complications of infantile diseases, rarely prove fatal. When such curious species as the Trichina Spiralis are discovered, they should be mentioned after the fatal disease, (Dr. Arthur Farre.)

(3.)-SPORADIC DISEASES OF SPECIAL SYSTEMS AND ORGANS.

This class consists of Congestions, Inflammations, the results of Inflammations in certain parts, and Mcchanical or Functional Discuses.

#### NERVOUS SYSTEM.

(Abercrombie, Marshall Hall.)

45 a MENINGITIS.

Inflammation of the membranes of the brain,—the pia mater, or arachnoid; arachnitis; phrenitis; phrensy; brain fever.

#### Ex.—Phrenitis, 8 days.

42 a DEBILITY (from Birth).

Has been generally used to designate the unknown cause of the deaths occurring shortly after birth, or perhaps more frequently from premature birth.

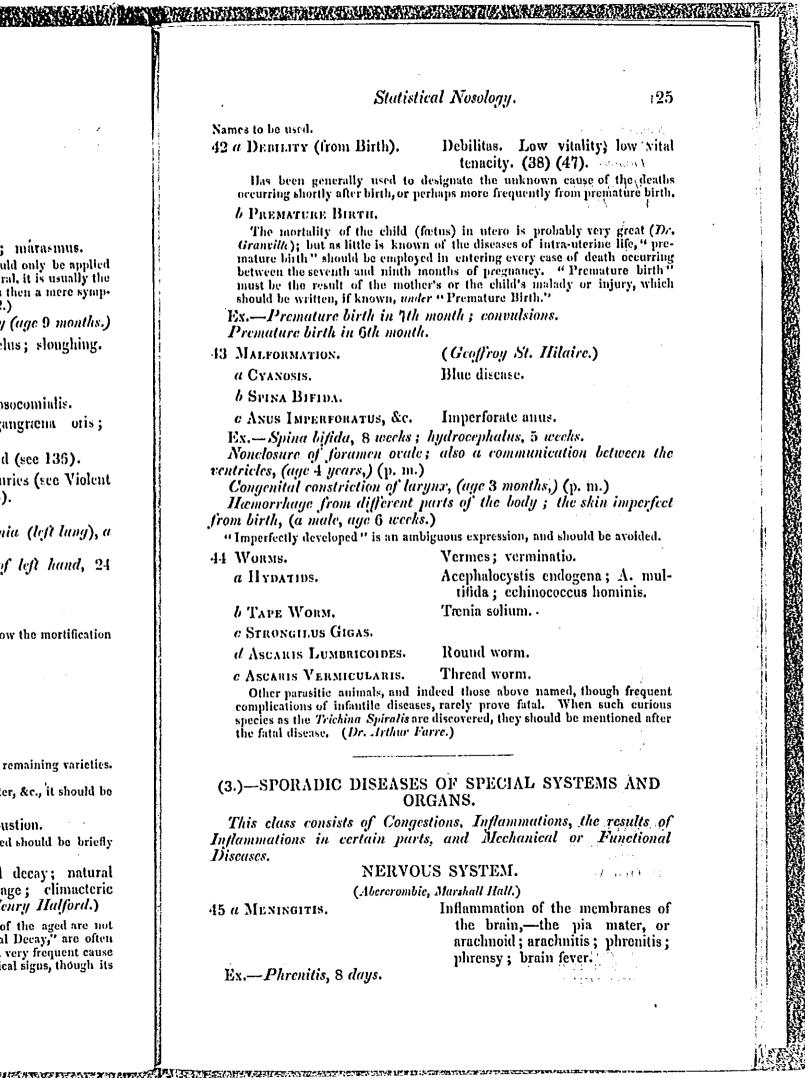

#### **b** PREMATURE BIRTH.

Names to be used.

The mortality of the child (foctus) in utero is probably very great (Dr. Granville); but as little is known of the diseases of intra-uterine life, " premature birth" should be employed in entering every case of death occurring between the seventh and ninth months of pregnancy. " Premature birth" must be the result of the mother's or the child's malady or injury, which

Ex.—Premature birth in 7th month : convulsions.

Statistical Nosology.

Names to be used.

**b** ENCEPHALITIS.

Inflammation of the substance of the brain ; cerebritis ; cerebellitis ; ramolissement or necrencephalus (one form of it is inflammatory.)

Ex.— Chronic cerebritis, with general paralysis, 12 months. Apoplexy-softening of brain, 7 months. Softening of brain ; ossification of arterics, --- months. Softening of central parts of brain ; convulsions, --- days.

c CEPHALITIS.

" Cephalitis" may be employed to designate the inflammation in the head when inflammation affects both the membranes and the substance of the brain to nearly an equal extent, or when the diagnosis is uncertain. (Rostan, Lattemand.)

Ex.— Cephalitis, about 50 hours ; scrous (flusion, 3) hours. Arachnitis, - days; alceration of Peyer's glands, (p. m.) (a child of 8 months.)

d Myelitis.

Inflammation of the spinal marrow. State whether with or without ramolissement.

46 Hydrocephalus (Acute).

Water on the brain; tubercular meningitis. (Rufz, P. II. Green, 33, 30.)

Inflammation of the central parts of the brain (Abercrombic).

Ex.- Tubercles in brain, about 2 months; hydrocephalus, 14 days, (p. m.)

47 APOPLEXY.

1.

Apoplexia; apoplectic fit; stroke.

When it is a second or third attack, add 2nd, 3rd, &c. attack, as the case may be; and state how long ago the first attack occurred. The same remark will apply to paralysis, delirium tremens, chorea, mania, epilepsy, convulsions, neuralgia.

Sudden death is frequently referred to apoplexy upon no satisfactory evi-dence; while effusion of blood into the arachnoid of infants is often overlooked, if we are to admit, according to M. Cruveilher's researches, that it destroys more than one-third of the infants who die shortly after birth. (Anat. Path

Ex.—Apoplexy, blood effused over convolutions of left hemisphere, 3 months, (p. m.)

Apople.cy, 34 hours ; youty deposit in arteries.

Apoplexy, 24 hours.

Apoplexy, (first attack), 7 hours.

Apoplexy, (— attach), 2 hours.

Paralysis (of

Apoplexy, 13 hours.

Paralysis, (of right side,) 6 weeks.

Apoplexy, paralysis, 4 years; hamatemesis and melana.

Apoplexy, (2nd attack), 1 hour; blood in the ventricles of brain, (p. m.)

48 a PARALYSIS OF-

Hæmencephalus; necrencephalus; paralytic stroke ; hemiplegia ; paraplegia (28).

To cases of apoplexy, complicated with paralysis, the old term "Paraplexy" may be applied. When ruptured vessels, or clots of blood, or ramoStatistical Nosology.

Names to be used.

lissement (necrencephalus) are detected, the part of the brain or affected should be stated. The parts paralyzed, and the time attack, should be added after paralysis. Loss of sensibility is a of mobility acinesia. Barbiers appears to be a peculiar form of Ex.—Paralysis, 2 months; hamaturia, 21 days. Paralysis of right side, 20 days (blood effused in left b Paralysis, 9 months; epilepsy, 3 months. Paralysis, 7 years; cerebral effusion, 7 days. Paralysis, amaurosis, 3 years. Paralysis (of ), 9 months; apoplexy, 2 hours Paralysis, 3rd attack, 30 hours. **6** Shaking Palsy. Paralysis agitans. Paralysis caused by lead, mercury, or arsenic, should be referr 49 DELIRIUM TREMENS. Trembling with deliri a potu. The cause may be stated. See " Intemperance," 135. Ex. -- Delivium tremens, 14 days; bronchitis, 4 days, Delirium tremens, 8 months ago; laryngitis, bronchitis, Delirium tremens, - years; 2nd attack, 5 days. St. Vitus's dance ; taran 50 CHOREA. 51 a MANIA. Madness ; insanity. Ex.—Mania, — months (from lactation.) Mania, 3 weeks; exhaustion. Mania (acute), 3 weeks. Mania, 36 years ; gradual exhaustion. Mania, 2½ years ; general paralysis. Epilepsy, mania, exhaustion. Mania, 12 days; congestion of brain, 3 days. Mania, - years; pneumonia, 1 week. Mania, 20 days; epilepsy, 3 days. 6 Monomania. Melancholia ; partial hypochondriasis. Mental imbecility; i C DEMENTIAinsanity. Ex.—Dementia, 4 or 5 years. Senile domentia; exhaustion; effusion into chest, 6 mon Congenital idiocy; mal d Infort. the brain. See 43. When lunatics die of phthisis, apoplexy, and other disca should be registered "Monomania, phthisis," &c. &c. &c. (Ga. Burrows, Prichard, Conolly.) 52 a Epilepsy. Epilepsia; falling sich leptic fit. Ex.—Epilepsy, 8 years ; asphyxia in a fit (congestion *effusion in lungs*), (p. m.) Epilepsy, apoplexy, 43 hours ; no morbid appearance in enlarged.

T. S. A. T. S. M. S. M. S. S. S. Street Stre	محمدة المستان في المساد عد

Names to be used.

Epilepsy from infancy, (age 6.)

Epilepsy, - years ; serous apoplexy, 36 hours.

Enileptic fit, 2 hours.

It should be stated in this and similar cases whether the fit were the first, &c., experienced ; or, at any rate, how long the patient had been subject to epilepsy.

Hysterics ; hysteric fit.

53 a Tetanus.

**b** Hysteria.

Trismus; lock-jaw; opisthotonos; emprosthotonos ; pleurosthotonos ; tonic spasm. (Mr. Curling.)

Ex.- Tetanus, 21 days.

Compound fracture of ulna, 6 days; tetanus, 24 hours.

**b** TRAUMATIC TETANUS. (See 23*d*, 145.)

c CRAMP.

Tonic spasm of particular muscles ; spasmus.

The tetanus of infancy (trismus nascentium) may be distinguished. Fatal cases of tetanus are generally induced by wounds (traumatic tetanus); the nature and locality of which should be added. " Cramp," when fatal, may probably be regarded as a form of tetanus.

Ex.-Spasm of the stomach, - hours (?) (a female, age 34.)

54 CONVULSIONS.

Convulsio; celampsia; clonic spasms.

The irregular muscular contractions, which cannot be referred to the pre-ceding heads, are called "Convulsions." When the convulsions occur in the course of other diseases, such, for instance, as " Diarrhoa," or are excited by teething (74) the cause of death should be registered "Diarrhæa, convulsions," or "Teething, convulsions," adding the respective durations of the symptoms. "All spasmodic and convulsive actions have their source in one of three parts of the excito-motory system : the first series have their origin in the spinal marrow itself, the axis or centre of the system : I shall designate these cases by the epithet centric. The second series have their source in the excitor nerves, consequently at a distance from that centre : I shall denominate them the excentric. A third series, like the spasmodic tic of the seventh pair, in the course of the motor nerve." "Convulsions belong to the late periods, and the close of all the diseases of the nervous system, as on the other hand, repeated convulsions eventually affect the encephalon," p. 38, p. 71. (Dr. Marshall Hull, On the Nervous System.) It may be added, that convulsions are one of the most common symptoms of zymotic disease and poisoning. When the convulsions are excentric, the nature of the excitement should be stated. (Evanson and Maunsell.)

Ex.—Convulsions, 9 days.

Convulsions, probably from imperfect digestion of a meal taken 12 hours previously.

Convulsions from premature birth in the 8th month.

Convulsions from teething, 20 days.

Teething, continued convulsion fit, 9 hours.

It is sufficient to mention cephalalgia, vertigo, catalepsy, ecstasy, lethargy, spinal irritation, in a fatal nosology.

Ex.—Spinal irritation, 5 years; tetanus, 5 days.

55 " NEURALGIA.

b TIC DOULOUREUX.

Neuritis?

Statistical Nosology

Names to be used.

56 OPHTHALMITIS OF OPHTHALMIA. Inflammation of the eye. Areste, V Purulent and scrofulous ophthalmia, and the other affections of the eye. may be distinguished when they are in any way connected with the cause of death. With a slight modification, this remark will apply to diseases of the car. See note 71.

57 OTITIS.

Inflammation of the car.

Ex.—Otitis, 14 days; erysipelas, 10 days.

(See the previous note.)

The nervous system is so important in man, that its morbid phenomena have been examined from different points of view, and very properly referred to many distinct diseases, which sometimes co-exist, or are reciprocally causes and effects. All the distinct diseases which led to the death should be registered, and, as much as is practicable, in the order of causation ; which appears tered, and, as much as is practicable, in the order of clusation; when appears often reversed in different cases. No special rule can be laid down applicable to all cases; but the following are examples: "Encephalitis, softening of the brain, paralysis;" "Apoplexy, paralysis;" "Ossified arteries, hamorrhage, apoplexy;" Meningitis, mania;" "Mania, encephalitis, dementia, thicken-ing of cranium;" "Dementia, paralysis;" "Cancer of cerebellum, epilepsy;" "Softening of the spinal marrow, paraplegia."

#### ORGANS OF CIRCULATION.

(Corvisart, Laennec, Dr. Hope, Dr. Clendinning, Dr. Stokes.)

58 a CARDITIS.

of the heart.

May be applied as a general term, equivalent to "Inflammation of the heart.

Ex.-Carditis, 12 months; dropsy, 8 weeks.

**b** PERICARDITIS.

brane, and of the sac in which the

heart is contained.

Whether with or without effusion of lymph, pus, or serum may be stated. See Rheumatic fever (20). (Pictairn, Dundas, Wells, Taylor.)

Ex.—Periearditis, 7 days.

Pericarditis, with adhesion of pericardium; hydrothorax and ascites, 24 years, (p. m.)

Pericarditis (adhesion of pericardium), hypertrophy (1st attack of pericardium), 2 years.

c ENDOCARDITIS.

Inflammation of the internal membrane of the heart. (Bouillaud.)

Frequently co-exists with pericarditis (endopericarditis) and is generally rheumatic.

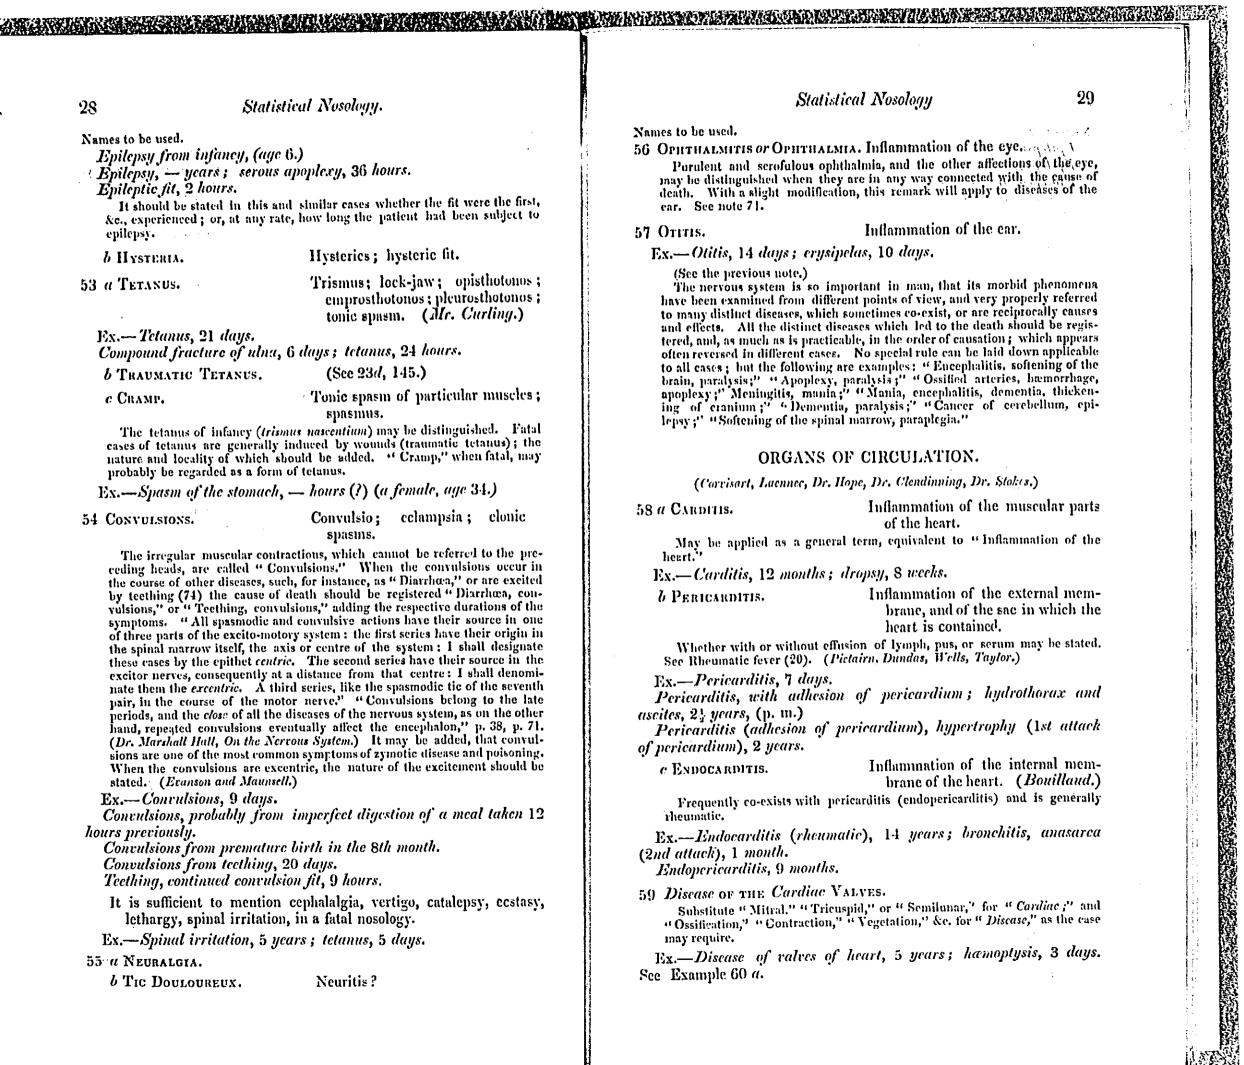

Ex.--Endocarditis (rhoumatic), 14 years; bronchitis, anasarca (2nd attack), 1 month.

Endopericarditis, 9 months.

59 Disease of the Cardiac VALVES.

Substitute "Mitral." "Tricuspid," or "Semilunar," for "Cardiac ;" and "Ossification," "Contraction," " Vegetation," &c. for " Discase," as the case may require.

Ex.-Disease of values of heart, 5 years; hæmoptysis, 3 days. See Example 60 a.

Names to be used.

Contraction of aortic opening; hypertrophy of left ventricle; dropsy above 20 years, (age 68.)

#### 60 a HYPERTROPHY OF THE *Heart* Enlargement of the heart; hyperor HYPERCARDIA. trophia cordis.

Dilatation, softening, ossification, and "simple," "eccentrie," or "concentric" (t) Hypertrophy, and the combination of these varieties, may be registered when accurately distinguished. Substitute "left ventricle," "right ventricle," "left auricle," "right auricle," for "heart " as may be required.

It has been elsewhere stated, that when rheumatism has existed, in connection with disease of the heart, it should always be registered.—" Rheumatic fever, endocarditis," " Rheumatic fever, pericarditis, hypertrophy of heart, dropsy," "Endocarditis, contraction of mitral valves, hypertrophy of left ventricle, dropsy," are examples of the mode of registering complications of heart disease in the order of sequence. *Dropsy* is so important a symptom that it should be invariably registered after the lesion by which it is believed to be caused.

Ex.—Heart disease after rheumatic fever, 4 years ago.

Disease of cardiac values, with dilatation, about 4 years ; asthma, dropsy, 6 months.

Disease of mitral valve, 5 months ; pneumonia, 7 days, (p. m.)

Dyspuce from valvular disease of heart, 4 months.

Hypercardia; apoplexy, 2 days.

Great enlargement of heart ; anasarea, 3 years,

Hypercardia; nephria, 3 years.

Hypertrophy of left centricle; hydropericardium, 8 months or longer.

Heart discuse, 4—5 years ; congestion of lungs and anasarca, about 3 months.

Heart disease, 18 months ; anasarca, 3 weeks ; hamoptysis, 6 days. Heart disease probably, only seen once.

b ATROPHY OF THE Heart. Wasting of the heart; atrophia cordis.

See the note under "Hypertrophy," 60 a.

61 ANEURISM OF THE Heart. Aneurisma.

Substitute "left ventricle," &c. ; "aorta," "popliteal artery," or any other artery, for "heart," and prefix "true," "false," as occasion may require. Death is often caused in ancurism by the bursting of the heart or of the

Death is often caused in aneurism by the bursting of the heart or of the vessel, a fact which may be registered after the aneurism. Ulceration is the most frequent cause of rupture of the heart; which is, however, sometimes caused by degeneration of the muscular tissue. (Hodgson.)

Ex.—Aneurism of aorta, (symptoms, 2 years.) Aneurism of thoracic aorta,— years; bursting into left\_pleura, —

hours, (p. m.)

Aneurism of the arch of aonta, - years, (p. m.)

#### 62 ANGINA PECTORIS.

Suffocative breast pang; neuralgia of the heart. (*Heberden*, *Forbes.*)

State whether there is disease of the heart.

63 FAINTING.

Syncope.

Fainting, polypus, cramp, palpitation, &c., of the heart, are rarely independent and fatal diseases: but they may be registered as well as the organic changes, when they are secondary diseases, and the immediate cause of death.

#### Statistical Nosology.

Names to be used. 64 *a* ARTERITIS.

ARTERITIS. Inflammation of arter Is believed to be a cause of dry gangrene. (Dupuytren.)

b Ossification of Arteries.

Sometimes induces dry gangrene, softening of brain, has tions of the heart, which are the direct causes of death.

65 Phlebitis.

Is of rare occurrence, except as the effect of venesection nature of which should always be stated. (Arnott.)

Phlebitis, 16 days; syncope, 6 or 8 minutes.

66 VARICOSE VRINS. Varix : hypertrophy of Only fatal when it gives rise to rupture of the veins and ha

#### **RESPIRATORY ORGANS.**

(Lannec, Louis, Andral, Williams.)

67 LARYNGITIS.

Inflammation of the l of the glottis.

"Chronic laryngitis, or ulceration of the larynx," is very disease. It occurs in phthisis, syphilis, and cancer, and sho accordingly. It is sometimes called "Phthisis laryngea."

Ex.—Laryngitis, 48 hours. Phthisis laryngea, 18 months.

68 LARYNGISMUS STRIDULUS. Spasms of the glo disease.

Where the cause of the affection is known, it should be stat *Ley.*)

69 a BRONCHITIS.

#### Inflammation of the catarrh ; tracheitis monia notha.

"Sthenic," "Asthenic," "Chronic" bronchitis may be of the registers. Bronchitis is frequently a complication of en disease, or phthisis, and should in such cases be registered bronchitis," &c.

Ex.—Bronchitis, 2 years; acute bronchitis and dy demic), 15 days, (p. m.)

Bronchitis of both sides, 14 days.

Bronchitis, emphysema, 10 years.

Bronchitis, 5 years; morbus cordis, 1 year.

Chronie bronchitis, 30 years ; nephria, 2 years ; anas of mitral valve.)

Bronchitis, 2 months ; pulmonary apoplexy.

b BRONCHORRHELA. Bronchial flux; hum pituitous catarrh.

70 a PLEURISY, or PLEURITIS. Inflammation of the brane of the lungs as

It is rarely fatal except when it terminates in effusion, and i registered "Empyema." "Rheumatic pleurisy" should be *Diaphragmatic pleurisy* is an important variety of pleurisy.

within the plcura. (Dr. Walshe.) Air within the pleura; generally from perforation of the membrane in phthisis.

Second Strength Z

and the

## Ex.-Pneumonia, 7 days; pneumothorax, 2 hours, (age 7 weeks.)

#### 71 a Congestion of the Lungs. Pulmonary apoplexy.

& PNEUMONITIS, or PNEUMONIA. Inflammation of the tissue of the and a second air cells; peripheumonia.

It should be stated whether of the right or left lung, or both. "Red hepa-tization," "Yellow hepatization." "Splenization," may be added, as the case may require. "Vesicular pneumonia," "Interlobular pneumonia," and "Typhoid pneumonia," may also be distinguished. When pneumonia, bron-chitis, and pleurisy succeed each other or other diseases, they should be registered in the presumed order of succession thus, "Hooping-cough, bron-chitis, pneumonia ;? "Influenza, pneumonia, pleurisy." (M. Girisolle.) Pneumonia is the common name for inflammation of the lungs; it would be convenient to call the purely inflammatory affection "pneumonitis," and to reserve "pneumonia" for the much more frequent inflammation super-

to reserve "pneumonia" for the much more frequent inflammation supervening on small-pox, hooping-cough, measles, typhus, and other diseases of the epidemic class. The same distinction may be advantageously extended to all other inflammations.

Ex.—Pneumonitis, (right lung,) 3 weeks. Pneumonitis, 7 days; convulsions, 2 days (tecthing.) Pneumonitis, 8 months. Pneumonitis, 3 weeks; croup, 2 days. Pncumonitis, 4 days. Pneumonia, in connexion with cyanosis. Pneumonitis, 8 days; hæmoptysis, 2 hours. Pneumonitis, hepatization (several months.)

c PLEURIPNEUMONITIS, or PLEU- Inflammation of the lungs, and , RIPNEUMONIA. pleura.

Ex -- Pleuripneumonitis, 48 hours.

Pleuripneumonitis, 21 days ; effusion in pleura, 5 or 6 days.

72 a Asthma. A because the Paroxysms of difficult breathing.

b Emphysema.

#### THE PROPERTY.

In popular language, "Asthma" is employed in the same sense as "diffi-culty of breathing" (dyspnæa), arising from a great variety of causes, of which it is justly considered a symptom. Emphysema, true asthma, is gene-rally complicated, when fatal, with disease of the heart and bronchitis, which should be registered. (Louis.)

Hypertrophy, dilatation, contraction of the air tubes, are observed chiefly in phthisis. The lung is of course liable to be the seat of hæmorrhage, dropsy, ordema, cancer, and tubercle; the latter being the cause of phthisis. its most destructive disease.

Ex.-Emphysema of lungs; bronchitis, 3 days. Asthma, 12 years; anasarca, 6 months; gangrene in legs, 6 months.

#### Statistical Nosology.

Names to be used.

73 Phrinisis.

Phthisis is still retained in this place; it is not universally admitted that it belongs to the same genus as scrofula. The term should be restricted to designate the tubercular disease. See 33 g.

Ex.—Phthisis, 2 years; peritonitis, 24 hours (perforation,) Phthisis, 4 years ; hemiplegia (right side), 3 months ; erysipelas of chest, 3 days, (p. m.)

Phthisis, 5-6 weeks; empyena, 3 weeks. Phthisis, 10 months ; hamoptysis, 9 days. Phthisis, 6 months; aphtha, 12 days. Phthisis, 3 years; dropsy, 3 months; ulcer of larynx. Phthisis, 6 months; (softened tubercles in left lung, p. m.) Phthisis (cavities in upper lobes of both lungs.)

Phthisis, 20 years; pneumothora.c, 3 days; adema of left side.

b STOMATITIS.

"e Parotitis,

76 QUINSY.

٠, ٠

77 PHARYNGITIS.

78 Œsophagitis.

Inflammation of the parotid glands. See mumps, scrofula, and typhus, (6) (17) (33).

Tonsillitis; cynanche tonsillaris. Inflammation of the tonsils.

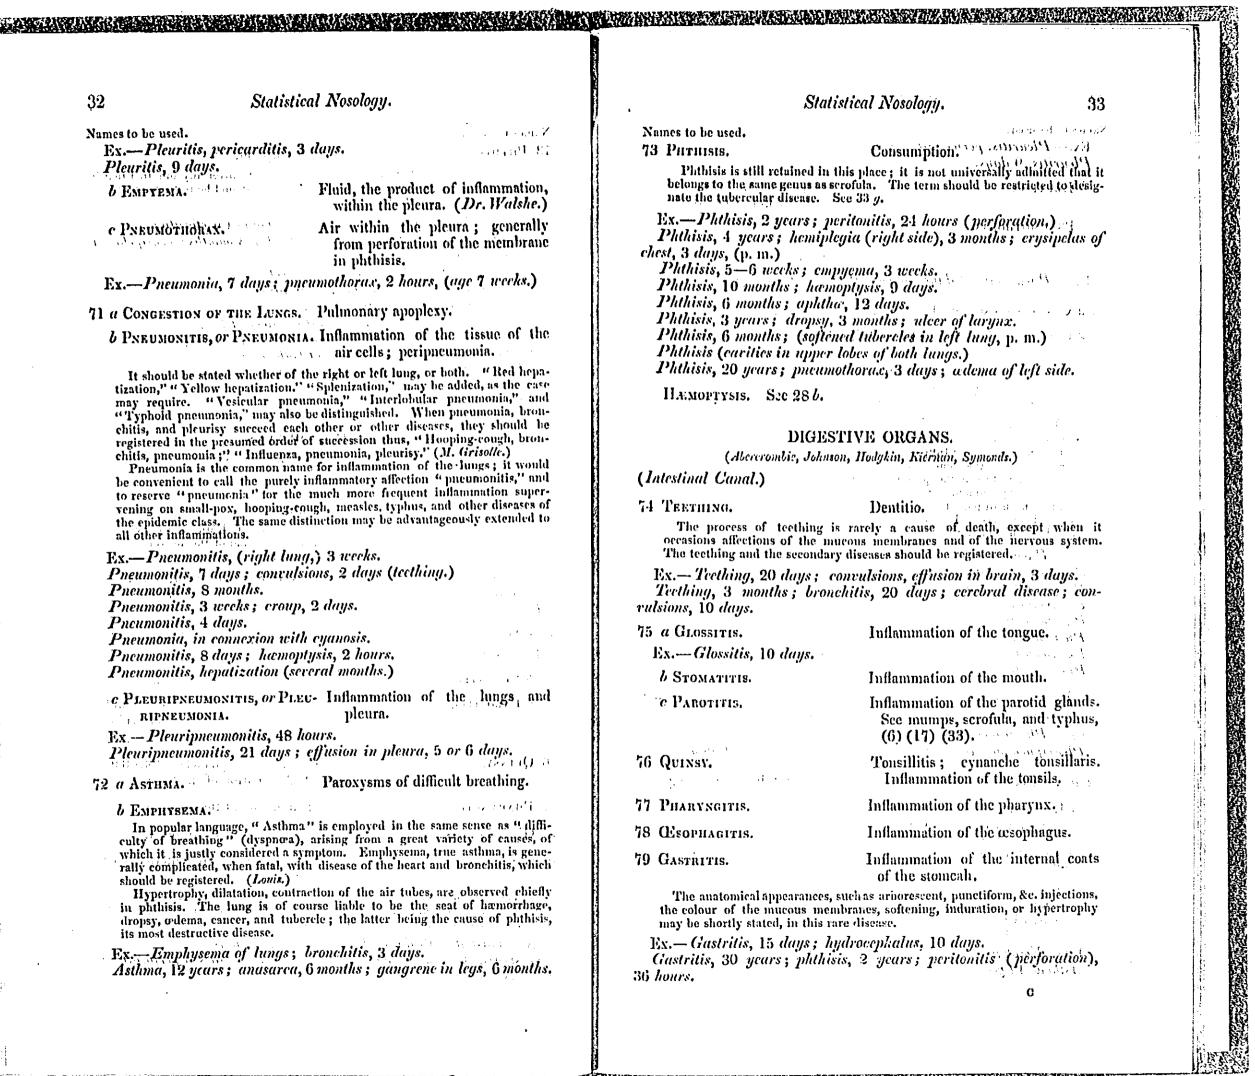

Inflammation of the pharynx.

79 GASTRITIS.

of the stomeah.

The anatomical appearances, such as an orescent, punctiform, &c. injections, the colour of the mucous membranes, softening, inducation, or hypertrophy may be shortly stated, in this rare disease.

Ex.— Gastritis, 15 days; hydrocepkalus, 10 days. Gastritis, 30 years; phthisis, 2 years; peritonitis (perforation), 36 hours.

Names to be used. 80 ENTERITIS.

Inflammation of the internal coats and of the glands of the small or large intestines; generally extending to the submucous and muscular coats. Ileo-colitis.

Duodenitis is inflammation of the duodenum. Colitis is inflammation of the large intestine. Gastro-enteritis may be applied to a complication of gastritis and enteritis. Chronic, acute, and sub-acute inflammations of the intestinal canal have been distinguished. "Infantile remittent fever" is, according to some pathologists, a sub-inflammation of the intestinal tube.

#### Ex.—Enteritis, 6 days.

Enteritis, nearly 2 months.

Enteritis, 4 months; tabes mesenterica, 3 months; bronchitis, 4 days.

Gastro-enteritis, --- peritonitis, 3 weeks.

81 a PERITONITIS.

Inflammation of the peritoneum

Is "partial" or "general." Follows intestinal "hernia," "injuries," "perforation ;" which are the primary causes of death. "Erythematic" Peritonitis has been distinguished. Puerperal peritonitis should be so designated. See 18 and 104.

Ex.-Peritonitis, 5 days ; (had reducible inguinal hernia on right side for 4 years.)

**b** TUBERCULAR PERITONITIS.

Chronic peritonitis will almost always be found to be tubercular; and should then be so designated. (33.)

Ex.—Peritonitis, 6 months, (tubercular.)

TABES MESENTERICA. See 33 f

82 a ILEUS.

Inflammation and gangrene of the muscular coat of the intestine. Iliac passion.

" Constinution sometimes gives rise to, and is sometimes caused by, ileus. Colic is rarely fatal unless it terminate in ileus. Alvine concretions and torpor of the intestine are causes of constipation. These particulars may be noticed. "Twist of the bowel," as it is called, causes " Ileus."

Ex.—Ilcus, 4 days.

c LEAD COLIC.

b INTUSSUSCEPTION.	Invagination of the bowel; a part of
	the bowel introduced into the part
	below.

Ex.—Intussusception, 4 days.

Colic of Poictou; painter's colic; lead colic; colica pictonum; colica pictorum.

This is one of the results of poisoning by lead. It belongs to the head " Poisoning," (137.)

83 HERNIA.

Rupture. "Congenital," "inguinal," "crural," or " umbilical," should be prefixed. Strangulation of the bowel produces peritonitis; which might, if thought Statistical Nosology.

Names to be used.

necessary, be registered. Where an operation has been performed, state that circumstance, as thus: old umbilicat hernia, 10 years; operation, 36 hours. Inguinal hernia, 5 years; strangulated, 20 hours; operation, 2 hours. (Lawrence.)

84 STRICTURE OF-

Add the part of the intestinal canal affected. Is generally either a consequence of previous ulceration or of cancerous disease ; and causes death by inanition, or by constipation and ileus. " Spas-molic stricture" may perhaps produce the same results.

Ex.— Contractura recti, 15 months.

Cancer, 3 months; colitis, 1 month; stricture of intestine, (the colon?) 20 months; inflammation, 7 days.

Stricture of bowel, caused by a plum-stone. (The intervals of time should have been stated.)

85 " ULCERATION OF-

b PERFORATION OF-

Add the part of the intestinal canal affected.

Ulceration is generally the effect of enteritis, dysentery, typhus, tubercle, or calculus in the appendix cace, verm, ; and may cause fatal peritonitis by perforating the intestines. The perforation of the stomach, or bowel, is at times spontaneous; it may be the effect of acrid poisons, or be produced after death by the gastric juice. (Carsuell, Hodykin.) (32) (35.)

Ex.—Peritonitis, 36 hours, from perforation of stomach, (p. m.) [It is not stated how the perforation was caused in this case.] Rupture of eacum close to appendix ; caused by two calculi of phosphate of lime and faces ; ill 3 days.

Calculus in appendix caci verm, causing perforation, 6 days.

86 a Dyspepsia.

of

Indigestion.

The embarras gastrique of the French, and "bilious attack," have been designated "Acute dyspepsia." A deficient, excessive, perverted appetite (anorexia, bulimia, pica) and heartburn, as well as nausea, vomiting, flatulence, tympanites, are either symptoms of other diseases, or are referred to this head. (Dr. Todd; Dr. R. D. Thomson.)

Ex.-Dyspepsia, 1 year ; gastro-enteritis, 1 month. Dyspepsia, 2 years; atrophy, 1 year.

b Pyrosis.	Water-brash. Gastron
C GASTRALGIA.	Gastrodynia, cardialgi
	nia, enteralgia, mor

teralgia, morbid sensibility of the stomach, gastric dyspepsia.

Diarrhea, dysentery, cholera, worms, salivation, ascites, hæmorrhoids, hæmatemesis, meliena, tabes mesenterica, will be found in other classes.

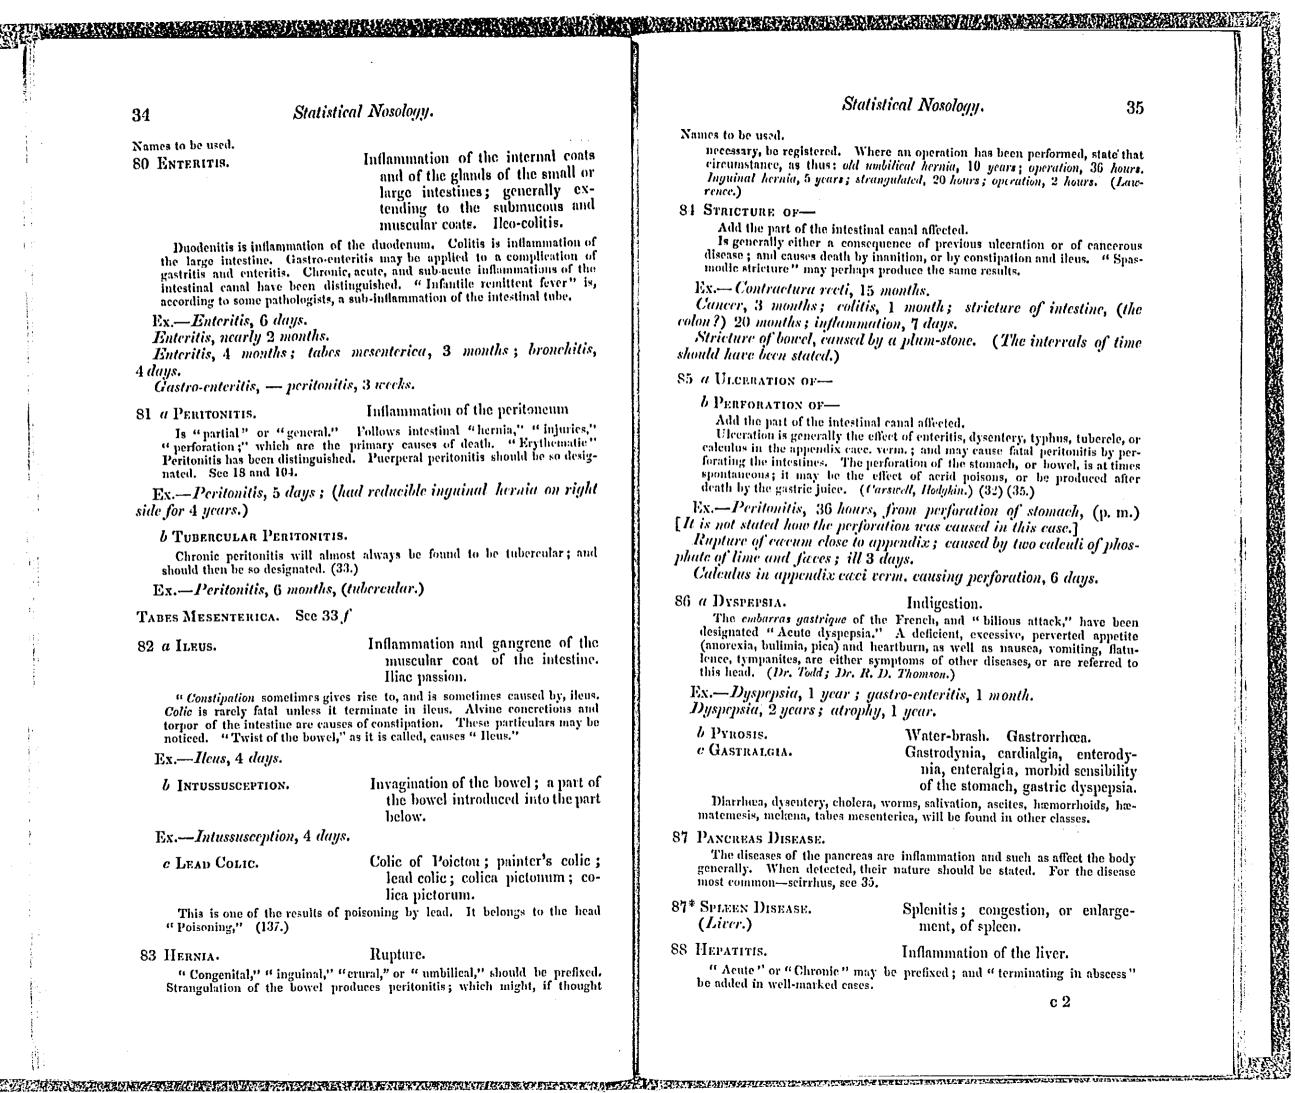

87 PANCREAS DISEASE.

The diseases of the pancreas are inflammation and such as affect the body generally. When detected, their nature should be stated. For the disease most common-scirrhus, see 35.

87* Spleen Disease.	Splenitis ; congestion,	
(Liver.)	ment, of spleen.	

88 HEPATITIS,

"Acute" or "Chronic" may be prefixed; and "terminating in abscess" be added in well-marked cases.

Names to be used.

PEX. Chronic heputitis, 1 year; diarrhaa and vomiting, 3 weeks. Hepatitis, 4 months; atrophy, 2 months.-

Hepatitis, 10 days.

Icterus.

89 a JAUNDICE. Jaundice may arise when the bile is retained undecomposed in the blood (Lichg); from obstruction of the ducts; from gall stones, or congestion, inflummation, and adventitious deposits in the liver. The cause of jaundice should be recorded. When jaundice terminates in apoplexy, it should be so registered. The jaundice of the new-born should be carefully distinguished. Ex.—Jaundice, 11 days.

Jaundice, 2 days (p. m.), (age 2 days.)

Chololithus ; biliary calculi. **b** GALL STONES.

Tuberculated liver; nutmeg liver; 90 CIRRHOSIS. hob-nailed liver.

Adipose degeneration of the liver. 91 FATTY LAVER: The functional disorders of the liver-diminution, excess, depravation of

the biliary secretion-are either symptoms of diseases, or are rately fatal. (Dr. Budd.)

Ex.-Liver discase; ascites, 9 months.

Licer disease ; erysipelas, several attacks ; peritonitis, 10 days, (p. m.) to the second second

Cirrhosis; -+;: anasurca, -- months.

#### a states to a t

#### URINARY ORGANS.

Note .- The technical or Latin names should be almost invariably employed in returning diseases of this and the following class. (Prout, Bright, Brodie, Christison.)

Inflammation of the kidneys.

92 NEPHRITIS. Pyelitis has been applied to inflammation of the lining membrane of the pelvis and cavities of the kidney. (M. Rayer, Mr. G. Robinson.)

Ex.-Nephritis of right hidney; gastritis, 11 days, (p. m.)

Suppression of the secretion of urine. 93 Ischurta. This with the following affection is generally a symptom of diseases. It sometimes precedes coma and convulsions.

Excessive secretion of urine, not 94 DIURESIS. containing sugar.

95 GRANULAR DISEASE OF THE Bright's disease. Renal dropsy. KIDNEYS OF NEPHRIA. Albuminuria.

Nephria has been derived from siges.

The presence of *nephria* is inferred with considerable certainty if the urine be impregnated with albumen, diminished in quantity, and of low specific gravity. When the return of the blood by the renal vein is obstructed, or congestion is produced, albumen is effused with the urine. (*Robinson*.) Dropsy, inflammation, and coma occur, and should be registered in the order of their occurrence. The same rule should be applied whether nephria follow or precede other diseases; such as disease of the heart and liver.

The albumen in the urine has been distinguished by Dr. Prout as serous and chylous : if the latter be ever observed, it should be described.

Ex.—Nephria, 6 months; bronchitis, 2 months, (p. m.) Diseased kidneys, 2 years; ovarian dropsy, (p. m.)

Diabetes, 18 months lung), (p. m.)	ars ; phthisis, 3 months. ; phthisis, 6 months (extensive car offusion in pericardium, 18 hours.
	c Acid). Stone, Lithia.

96 DIABETES STORAGE STATES

S . S . A . A . C

disease of the prostate gland.

The most common diseases are inflammation, enlargement, and concretions -- which may be substituted for disease in the registers. (Sir E. Holme, Mr.

Coulson.) Ex.-Disease of prostate, 8 or 9 years; abscess in perinaum.

100 a Contractura urethra. Ischuria urethralis. Scricture of the

Urethra. -Ex.—*Contractura*<sup>+</sup> urethræ [ cased; red hepatization of lungs.

**b** Infiltratio urinæ.

Extravasation, or infiltration of urine in the cellular tissue.

For obvious reasons, several of the diseases of the urinary organs co-exist or succeedleach other; thus, stricture of, the urethra may give rise to diseases of the bladder and kidneys. Stone is the accidental consequence of an altered state of the urine; and when it is formed, may occasion inflammation of the bladder or suppuration of the kidneys. Diabetes, in the phraseology of Dr. Prout, is the result of derangements in the primary or secondary assimilative functions; and the oxalic acid diathesis is, according to him, connected with epidemics and cutaneous eruptions-as uric acid is with gout, and lactic acid with rheumatism.

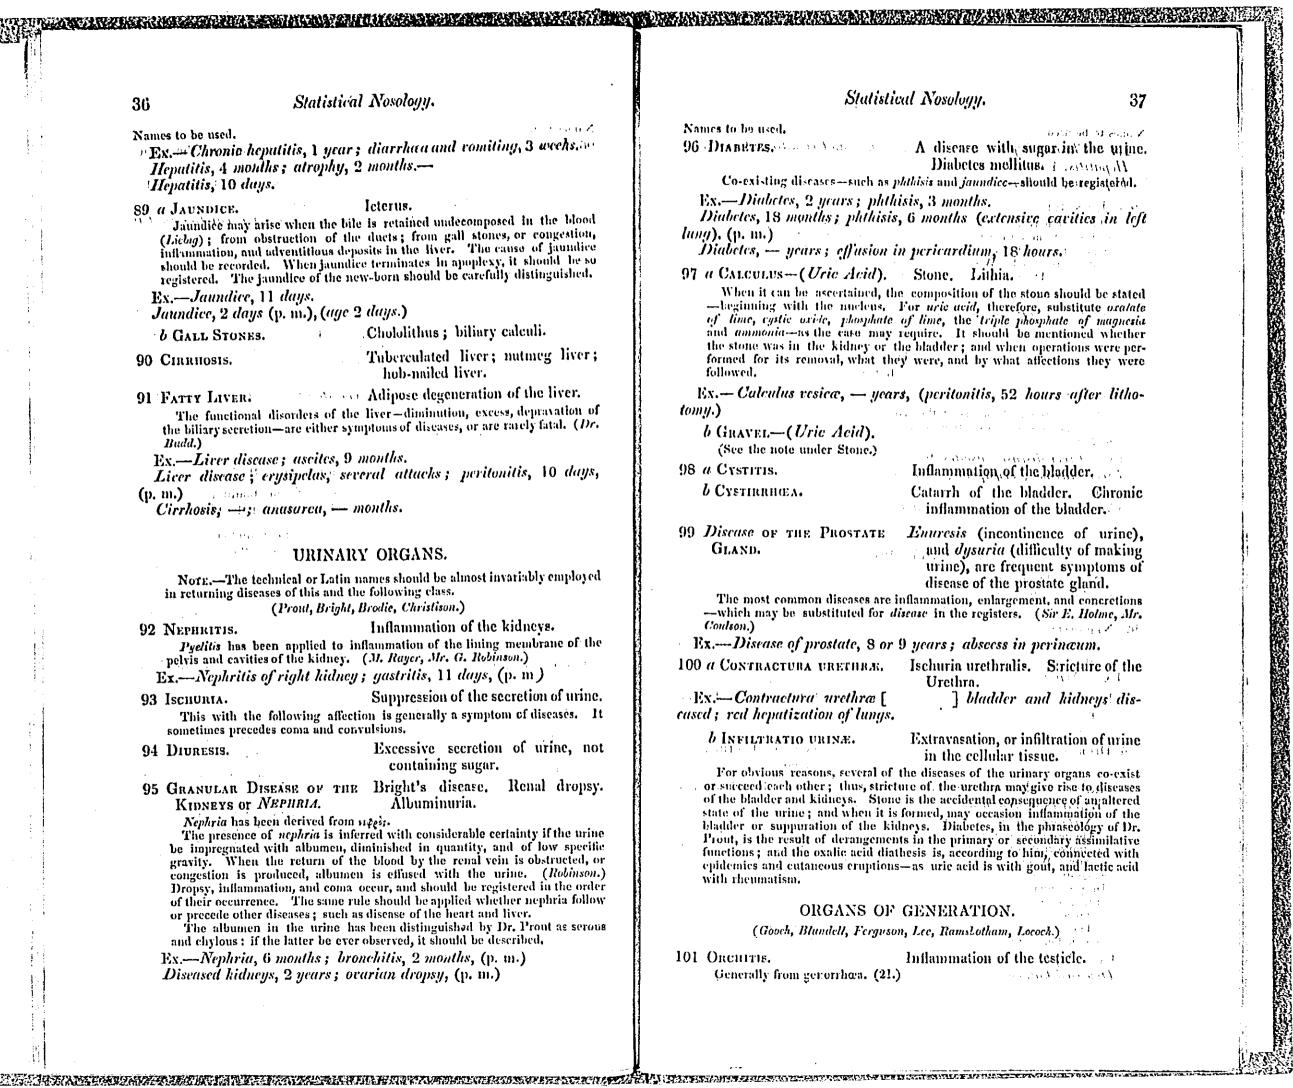

#### ORGANS OF GENERATION.

#### Statistical Nosology.

(4)--EXTERNAL CAUSES: POISONING, ASPHYXIA, 777 INJURIES.

Great numbers of the cases of disease in the previous classes are caused by external agents; by intemperance, cold, want, and effluvial poisons. But where the external causes are not striking and obvious," they are very properly not registered; for so much of their general influence as can be surmised is always understood to be in operation, and to be susceptible of demonstration, by reasoning on the wider basis of the aggregate facts. In the registration of deaths under this class, the following points should be attended to :---

(1.) Before deaths are ascribed to intemperance, starvation, poison, or injury, its agency should be distinctly ascertained.

(2.) Where a person who has suffered from previous intemperance, starvation or poison, dies of a specific disease, the cause of death should be registered " Intemperance, delirium tremens;" " Starvation, typhus," &c. &c.

(3.) In the deaths by mechanical violence, the nature of the injury may be stated. The circumstances in which the death happened, and the machine, railway, mine, factory, work, or animal, by which it was caused, should be stated.

(4.) With reference to the circumstances which attended the death, it should be inquired whether it was an accident, a suicide, manslaughter, murder, justifiable homicide, or judicial execution; and the result of the injury should be registered.

(5.) The duration of illness, dating from the receipt of the injury, or the operation of the cause, should always be stated.

For full instructions respecting the registration of violent deaths, see the Letter to Coroners, and the subsequent observations, part 2.

(Orfila, Devergie, Beck, Christison, Taylor.)

Names to be used.

135. INTEMPERANCE. Drunkenness; ebriositas; ebrietas.

Habitual and excessive indulgence in spirits, wine, or fermented liquors is

to be generally understood by intemperance : where opium or any other drug is taken, and when children or other persons are suddenly destroyed by a

large draught of spirits, the particulars should be mentioned.

Intoxication leads to accidents of various kinds, which should be registered, "Intoxication; fall from a horse," "Intoxication; exposure to cold," &c. &c.

Many drunkards are exposed alternately to, and die from, the effects of starvation, and intemperance; their deaths should be registered, "Intemperance; Starvation," from want of shelter, clothing or food. State any important facts of the case.

Ex.-Intoxication ; effusion on brain, --- hours.

Exhaustion caused by the over use of stimulants, - years. 136 STARVATION.

Want of food ; destitution ; cold :

fames; frigus.

This is generally intended to imply the privation of the necessary quantities of food, clothing, and firing. If any person be unhappily starved in the last stages of consumption (or other chronic diseases) the death should be registered, "Consumption and starvation;" and the arrangement should be reversed where the starvation is believed to be the cause of the fatal disease. Death by starvation may, it is evident, in different circumstances be an accident, a suicide, manslaughter or murder; and should be distinguished accordingly. Where a person dies from exposure to cold in a snow-storm, or in a frosty night, and when infants are murdered by exposure to cold, or die from the want of their natural nutriment, milk, the specific circumstances should

40

Names to be used.

be stated as nearly as they can be ascertained. (Datton, Liebig, Dr. Budd, Dr. R. D. Thomson.)

137 POISONING BY -

Venenum; venenatio.

The particular poison should if possible be ascertained and registered. The more common and fatal poisons are-opium (solid or in the form of laudanum), arsenic, oxalic acid, bichloride of mercury (corrosive sublimate), hydrocyanic acid (prussic acid), strychnia (nux vomica), sulphuric acid, verdigris, com-pounds of lead, night-shade, cautharides; the gases,—carbonic acid, carburetted hydrogen, sulphuretted hydrogen; quack medicines or official drugs, given at improper times and in over doses.

The motive which led to the administration of poison is a remote cause of death : but it cannot always be ascertained.

To decide in some cases whether death has been caused by poison requires a thorough knowledge of medicine and analytic chemistry; but the following remarks will put the Registrars on their guard against registering suspicious cases without a certificate from a medical man, or a coroner's information.

The chief characteristics usually ascribed to the symptoms of poisoning, considered generally, are, that they commence suddenly and prore rapidly fatal; that they increase steadily; that they are uniform in nature throughout their course; that they begin soon after a meal; (i. e., soon after the poison has been given); and that they appear while the body is in a state of perfect health.-Christison. The moral evidence is also taken into account, such as the fact of other members of the family having been similarly affected at the same time; the person suspected hastening the funeral, and giving a false statement of the circumstances of the death; having a personal quarrel with the deceased ; succeeding to his property, &c. &c.

#### (a) Opium.

Produces deep sleep; and in large doses death in 7-12 hours. From two to four drops of laudanum, or the one-eighth of a grain of opium, have proved fatal to infants. Daffy's clixir, and other " soothing " quack medicines which contain opium, sometimes destroy the children to whom they are administered.

Ex.-Laudanum, 2 drachms; which she had bought to procure sleep; (a pauper in a workhouse.)

#### (b) Arsenic (Oxide of).

The symptoms-burning pain in the stomach; dryness in the throat. Vomiting and purging generally begin in half an hour or an hour, and are followed by convulsive tremors, terminating fatally in one to three days. The poison is sometimes fatal in six hours; at other times in as many weeks. The white oxide is almost tasteless, and is therefore more frequently used by murderers than any other poison...

(c) Corrosive Sublimate.

#### Bichloride of Mercury.

The symptoms somewhat resemble those produced by arsenic, but they supervene immediately; a strong, acid, metallic taste, and constriction or burning in the throat are felt, followed by irritation in the alimentary canal, with the discharge of blood upwards and downwards. If these symptoms be accompanied or followed by true mercurial saliration, "it may be safely in-ferred that some soluble compound of mercury has been taken."-Christison. The other preparations of mercury produce salivation and shaking palsy, which are secondary effects of mercurial poisons, as colic and paralysis are of lead. See 82 c.

#### (d) Nux Vomica.

#### Strychnia, the active principle.

This poison produces death very rapidly by violent convulsive starting spasms (tetanus).

(c) Hydrocyanic Acid.

Prussic acid.

Kills instantly in large doses, or in a few minutes-after violent convulsions. If the patient survive 40 minutes he will generally recover.

Statistical Nosology.

#### Names to be used.

(f) Oxalic Acid.

" If a person, immediately after swallowing a solution of a crystalline salt, which tasted purely and strongly acid, is attacked with burning in the throat, then with burning in the stomach, vomiting, particularly of bloody matter, imperceptible pulse, and excessive langour, and dies in half an hour, or still more, in 20, 15, or 10 minutes, I do not know any fallacy that can interfere with the conclusion that oxalic acid was the cause of death."-Christison, Oxalic acid is often mistaken for Epsom salts, from which it is easily distinguished by the taste. The salts are not acid, but bitter.

## [Sulphuric Acid (Oil of Vitriol),

#### { Nitrie Acid (Aquafortis), (g)Indrochlorie Acid.

Are liquid corrosive poisons. "If, immediately after swallowing a liquid which causes a sense of burning in the throat, gullet, and stomach, violent comiting ensues, particularly if the vomited matter is mixed with blood ; if the mouth becomes white or yellow, and stripped of its lining membrane, and the cheeks, neck, or neighbouring parts show vesications of white, and subsequently yellow or brown, excoriated spots; if the *clothes* show *red spots*, and are disintegrated there, I cannot see any objection to the inference that *nitric* or sulphuric acid has been taken."-Christison.

#### (h) Liquor Potassa.

Ex.-Liquor Potassæ (quantity not known), 24 hours, (p. m.)

#### (i) Carbonic Acid.

The circumstances in which this and other poisonous gases are inhaled should be stated. Carbonic acid is given off by lime-kilns, fermenting liquors (in brewers' vats for instance), and burning charcoal.

138 a Scald.

Combustura. See Note 139.

b Burn. 139 EXPLOSION.

> It should be stated what part is affected ; whether the injury occurred in any mine, &c. ; and what circumstances led to the fatal explosion, burn, or scald.

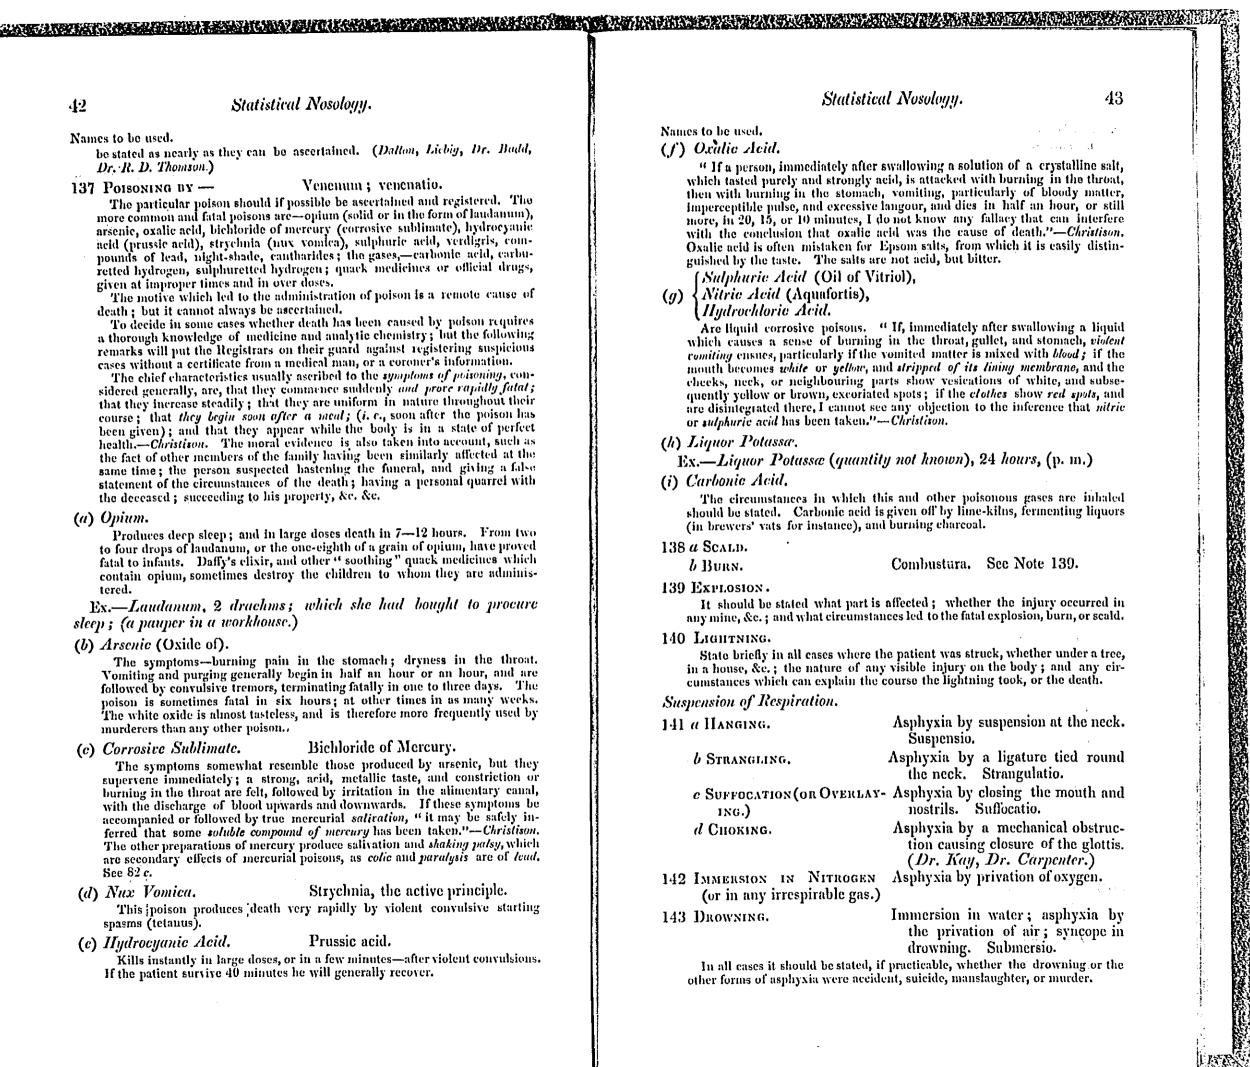

#### 140 LIGHTNING.

State briefly in all cases where the patient was struck, whether under a tree, in a house, &c.; the nature of any visible injury on the body; and any circumstances which can explain the course the lightning took, or the death.

Suspension of Respiration.

141	<i>a</i> Hanging.	Asphyxia by suspen Suspensio.
	b Strangling.	Asphyxia by a ligather the neck. Strang
	c Suffocation (or Overlay- ing.)	Asphyxia by closing nostrils. Suffoca
	d Choking.	Asphyxia by a mee tion causing closu (Dr. Kay, Dr.
142	IMMERSION IN NITROGEN (or in any irrespirable gas.)	Asphyxia by privati
143	DROWNING.	Immersion in water the privation of drowning. Subn

In all cases it should be stated, if practicable, whether the drowning or the other forms of asphyxia were accident, suicide, manslaughter, or murder.

An AV Statistical Nosology.

44

Contusio.

Concussio ; shock.

& Concussion or-

, FRACTURE OF FRACTURA.

Ex.-Practure of femur, 41 months; bed sores, 45 days.

#### d DISLOCATION OF-LUXATIO.

State of what parts ; whether accidental or not ; and how caused ; whether, by falls from heights, or into pits; by the fall of earth, stone, &c.; by machinery; by railway carriages or engines; stage coaches, or other coaches, horses, &c. &c.

Many children appear to die from injury in the birth. See 42.

Ex.—Difficult parturition, 3 hours. (The child.)

145 Wound, Vinney Villing, Cut, chop, bite, shot.

State of what part; by what instrument inflicted, &c.; and whether acci-dental, suicidal, &c. Loss of blood (28), or secondary inflammation, is generally the immediate cause of death.

rany the immediate cause of death. Injuries are followed by tetanus, crysipelas, mortification, extravasation of utine, emphysemia, Ke, "which should be registered after the injury; when surgical operations are it cause of death, the disease or injury for the relief of which they are performed, and the diseases by which they are followed, should be registered; "(Sir<sup>1</sup> Addey Cooper, Mr. Liston, Mr. Guthrie, Mr. Alcock, Chetius and South.)"

Es.-Injury of head by a fall [ from drocephalus, 3 weeks.

] 1 month; hy-

In the Act 6 and 7 Wm. IV., c. 86, s. 25, it is provided that "in every case in which an inquest shall be held on any dead body, the jury shall inquire of the particulars [one of which is the 'cause of death'] lierein required to be registered concerning the death, and the coroner shall inform the registrar of the finding of the jury, and the registrar shall make the entry accordingly."

The attention of the coroners throughout the country is invited to this clause, and to the previous remarks on violent deaths, as the particulars of the cause of death are required to be stated in precise terms by the jury, under the direction of the coroner. In "sudden deaths," without violence, the fatal disease which is the cause of death should be particularly inquired into; and such terms as " Natural death," or " Visitation of God," should be avoided whenever more definite information can be given.

It must occasionally happen in a registration of the deaths of the entire population, that the cause of death is unknown, or only imperfectly known, either from the peculiar circumstances in which it occurred, from there having been no medical man in attendance, or, if present, from his having had no means of obtaining adequate information.

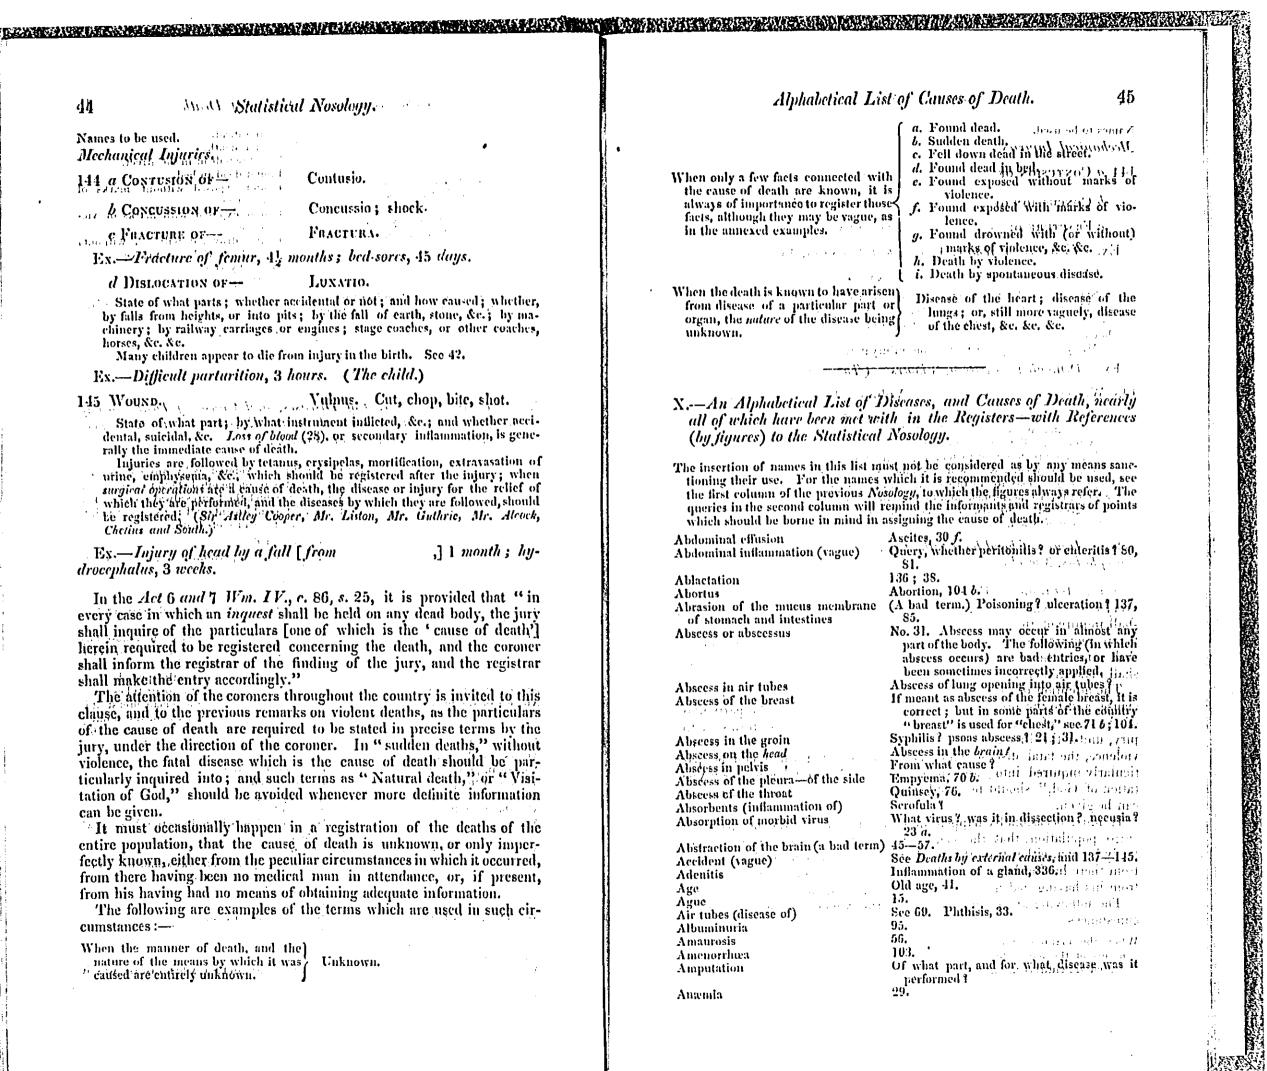

The following are examples of the terms which are used in such circumstances :---

When the manner of death, and the) nature of the means by which it was? Unknown. " caused are entirely unknown."

b. Sudden death. c. Fell down dead in the street. d. Found dead in bedrey (770') w 11 i c. Found exposed without marks of When only a few facts connected with the cause of death are known, it is violence. f. Found exposed With marks of vioalways of importanco to register those facts, although they may be vague, as lence. g. Found drowned with (or without) in the annexed examples. h. Death by violence.
i. Death by spontaneous discuse. When the death is known to have arisen Disease of the heart; disease of the from disease of a particular part or lungs; or, still more vaguely, disease organ, the nature of the disease being of the chest, &c. &c. unknown. the state of the s X .- An Alphabetical List of Diseases, and Causes of Death, nearly all of which have been met with in the Registers-with References (by figures) to the Statistical Nosology. The insertion of names in this list must not be considered as by any means sanc-tioning their use. For the names which it is recommended should be used, see the first column of the previous Nosology, to which the figures always refer. The queries in the second column will remind the informants and registrars of points which should be borne in mind in assigning the cause of death. A scites, 30 f. Query, whether peritonilis? or chleritis 1 80, Abdominal effusion Abdominal inflammation (vague) **\$1**. 136; 38. Ablactation Abortion, 104 6. Abortus | (A bad term.) Poisoning? ulceration ? 137, Abrasion of the mucus membrane of stomach and intestines No. 31. Abscess may occur in almost any Abscess or abscessus part of the body. The following (in which abscess occurs) are badsentries, or have been sometimes incorrectly applied, the Abscess of lung opening into air tubes fr If meant as abscess of the female breast, it is Abscess in air tubes Abscess of the breast It meant as abscess of the female breast, it is correct; but in some parts of the could' "breast" is used for "chest," see 71 6;101. Syphilis? psons abscess, 1:21;131.000, 7000 Abscess in the brain to inter one consister From what cause? #### PART II.

#### XI. A LETTER ADDRESSED TO CORONERS, WITH OB-SERVATIONS ON THE REGISTRATION OF THE CAUSES OF VIOLENT DEATHS.

(CIRCULAR.)

General Register Office, SIR, 10th August, 1845. I HAVE the pleasure of transmitting to you a copy of my Sixth Annual Report, and I beg to direct your attention to pp. 210-266, in which I have given an abstract of the causes of the violent deaths in England, chiefly derived from the "informations" which you and the other coroners have given under the Registration Act.

In order that the results of the "informations" may be compared, and become really useful to the public, in pointing out the causes of violent deaths (which appear to be of much more frequent occurrence in this kingdom than in the rest of Europe), the nature of the fatal cases inquired into by juries must be returned somewhat more in detail than is done at present. In many " informations" all the facts that can be useful are stated; and it is only required that the practice, already partially existing, should be extended and made uniform, to place the whole upon a satisfactory footing.

You will observe, by referring to the Abstracts, pp. 234-6, that, exclusive of suicides, executions, some doubtful cases omitted, and 971 imperfectly returned in one year, 3305 persons were killed by mechanical injuries of various kinds-by falls, falls of stone, &c., machinery, railways, waggons, carriages, horses, and other agencies-fracturing their bones or crushing their bodies; 1950 lives were lost by water (drowning); 3057 by fire (148 by explosions, 2577 by burns, 332 by scalds); 188 persons were accidentally poisoned; 65 were murdered in ways not stated in the "informations;" and there were 83 cases of manslaughter.

It is believed that, although deaths by personal violence have diminished, poisoning, the violence called accidental, and the resulting dangers, have increased within the present century;which may be ascribed to the number of deadly poisons now so accessible in every chemist's shop, the introduction of the new force of steam, the redoubled activity of traffic, travelling, navigation, agriculture, manufactures, and mining operations. Science itself creates new instruments of death. But if these instruments be brought to light by your inquests, described accurately, and placed fully before the public, science will find no difficulty in discovering Е2
