

# Microbial Management for Control of Safe and Comfortable Drinking Water

## Yasuhiro Asada

The topics of this research are to investigate occurrences and fates of pathogenic bacteria and algae in water source and water treatment and to suggest the ways to control these microorganisms.

-Produce the Safe and Comfortable water  
We investigate the fate of pathogenic bacteria and odorous substance during water treatment.

- Monitoring of Pathogenic Bacteria and Algae  
We collect the data on the concentration of microorganisms (pathogenic bacteria, algae etc.) and the water information. And we evaluate the correlation among these information.
