

Research on safety management of harmful compounds in the living environment

Department of Environmental Health Kanae Bekki

Daily necessities around us, building materials and interior materials of buildings, smoking behavior, etc. are sources of indoor harmful chemical substances. Therefore, in this study, in order to maintain and manage a safe and secure living environment, we are working on clarifying the actual situation of harmful compounds and measures to reduce health risks.

There is concern that exposure to chemicals in children may cause allergic and neurological disorders.
